DOCUMENT CONTROL

About this manual

Product	Dalliqo
Manual	CRM Operator User Manual
Intended reader	CRM Operator / General Staff (Standard member template)
Access level documented	Member — Standard member template
Version / revision	1.0 · Rev. B
Date of preparation	25 October 2026
Screenshots	Captured from the running web application signed in as the demo user **son@demo.recrm.test** (synthetic Karachi demo data). Figure numbering: 39 figures.

Words in **this style** are labels exactly as they appear on screen. Notes, tips and important warnings are shown in coloured boxes.

This manual describes what your access level can do as enforced by the system. Your business owner may give you a different set of permissions; if a button described here is missing, your access does not include it.

CHAPTER 1

Introduction

1.1 What the system does

Dalliqo keeps a property business's clients, properties, owners, follow-ups and documents in one place. It automatically matches buyers and tenants with suitable properties, reminds the team about calls and visits, and shows the business's performance on a live dashboard. Everyone in the business works on the same data, from the web on a computer or the mobile app, and changes appear for colleagues straight away.

All figures in this manual are real screenshots of the application signed in as a demo user with your access level. The data shown is synthetic demo data (Karachi examples) — the names, phone numbers and properties are not real.

1.2 Your role

CRM Operator / General Staff (Standard member template). You keep the office running: you enter and update clients, properties, owners and documents, schedule follow-ups for the team, and prepare reports. This is also the default access for a family member who helps run the business.

Your main responsibilities

- Enter new clients, properties and owners accurately and without duplicates
- Upload and organise documents and photos
- Schedule follow-ups and make sure nothing is overdue
- Confirm listing availability with owners
- Download reports when the owner asks

1.3 What you can do

- See the dashboard, My Day and use the global search
- View clients, properties, owners, matches, follow-ups, notes, documents and activity history
- Add and edit clients and their requirements
- Add and edit properties, change status, confirm availability and upload photos
- Add and edit property owners
- Change match status (viewed, shortlisted, contacted, rejected)
- Create, reschedule and complete follow-ups and property visits
- Write notes on clients, properties, owners and follow-ups
- Upload, rename and share documents
- See dashboard analytics (charts, lead sources, team performance)
- Download Excel and PDF reports
- See the list of team members

What you cannot do, and why

Action	Why
Delete clients, properties, owners or documents	Deleting is reserved for the owner and managers to protect the business's data.
Add or manage users	Only the business owner manages the team.
Change business settings or matching rules	Only the business owner changes settings.
Read the audit log	The audit log is for the owner and managers.

Note. Your access is checked by the server every time you act, not just hidden on screen. If your manager changes your permissions, the change applies the next time a page loads. If you need extra access, ask the business owner.

CHAPTER 2

Signing in and first-time setup

2.1 Signing in

Purpose	Open your account securely.
Where to find it	The web address provided by your business owner or system provider.
Before you start	The business owner has added you and given you a temporary password.

Step by step

1. Open the web address in Chrome, Edge or Safari.
2. Type your e-mail address and password.
3. Click **Sign in**. The dashboard opens.

How to check it worked	Your name's initial appears in the round button at the top right, and the business name appears at the top left.
If something goes wrong	See "Unable to sign in" in the Troubleshooting chapter.

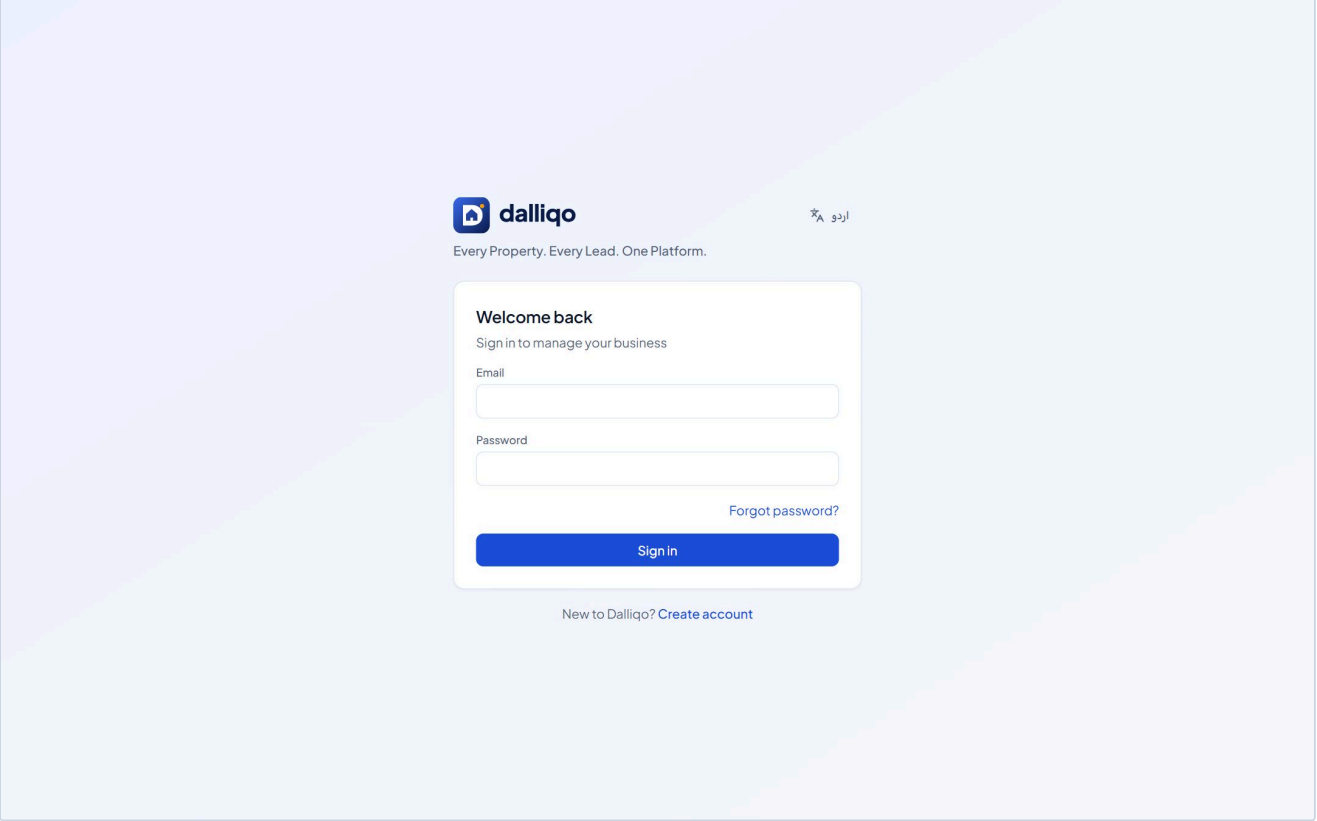

Figure 1: The sign-in page

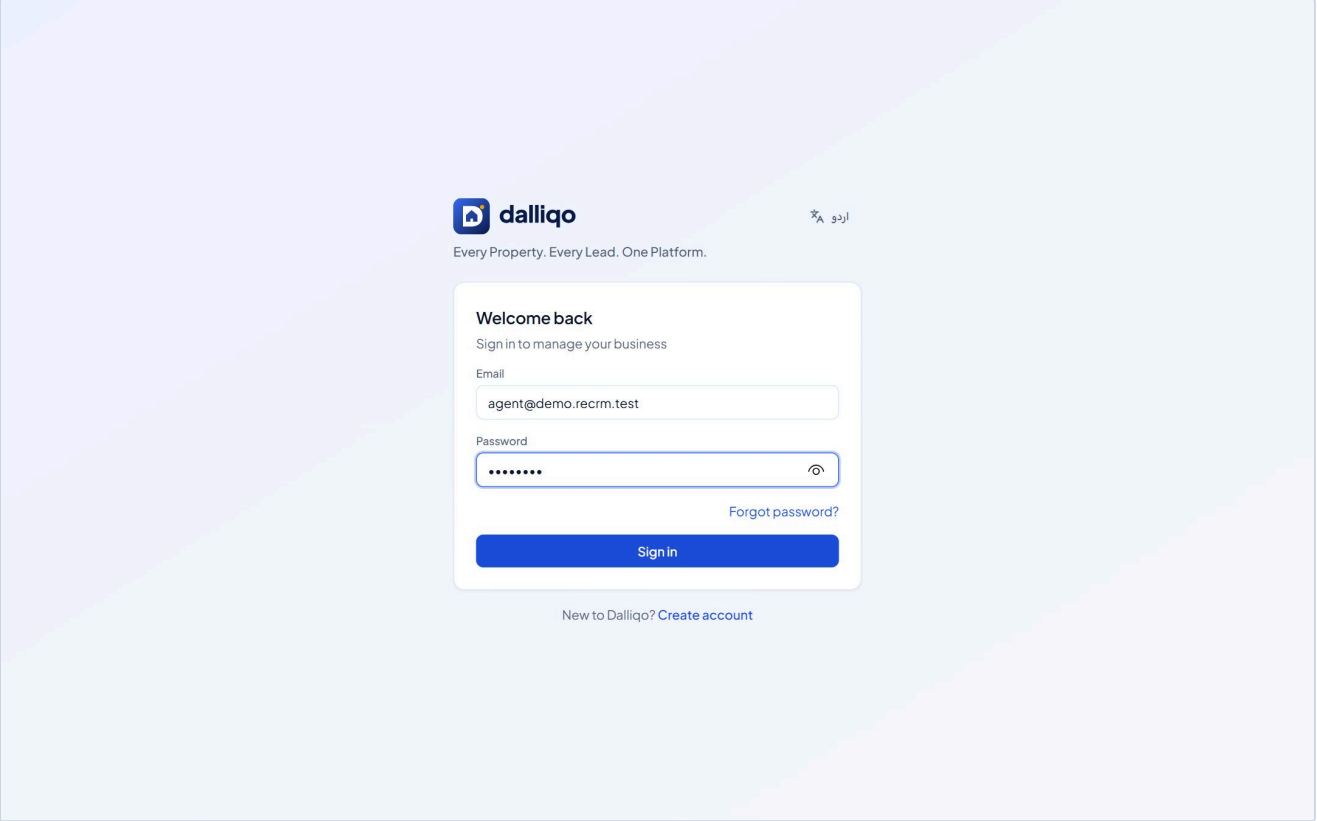

Figure 2: Signing in with e-mail and password

2.2 First sign-in: choose your own password

The first time you sign in with the temporary password the owner gave you, the system asks you to choose a new password before you can continue. Enter the temporary password, then your new password twice (at least 8 characters, with letters and numbers). From then on, only you know your password.

> **Important.** Never share your password, and never use a colleague's login. Every change you make is recorded under your name.

2.3 Forgot your password

Purpose	Set a new password if you have forgotten it.
Where to find it	Sign-in page → **Forgot password?**

Step by step

1. Enter your e-mail address and submit.
2. Open the e-mail you receive and click the reset link (it works once and expires).
3. Choose a new password. All your other sessions are signed out for safety.

If something goes wrong	If no e-mail arrives, ask the business owner to set a temporary password for you from the Users screen.

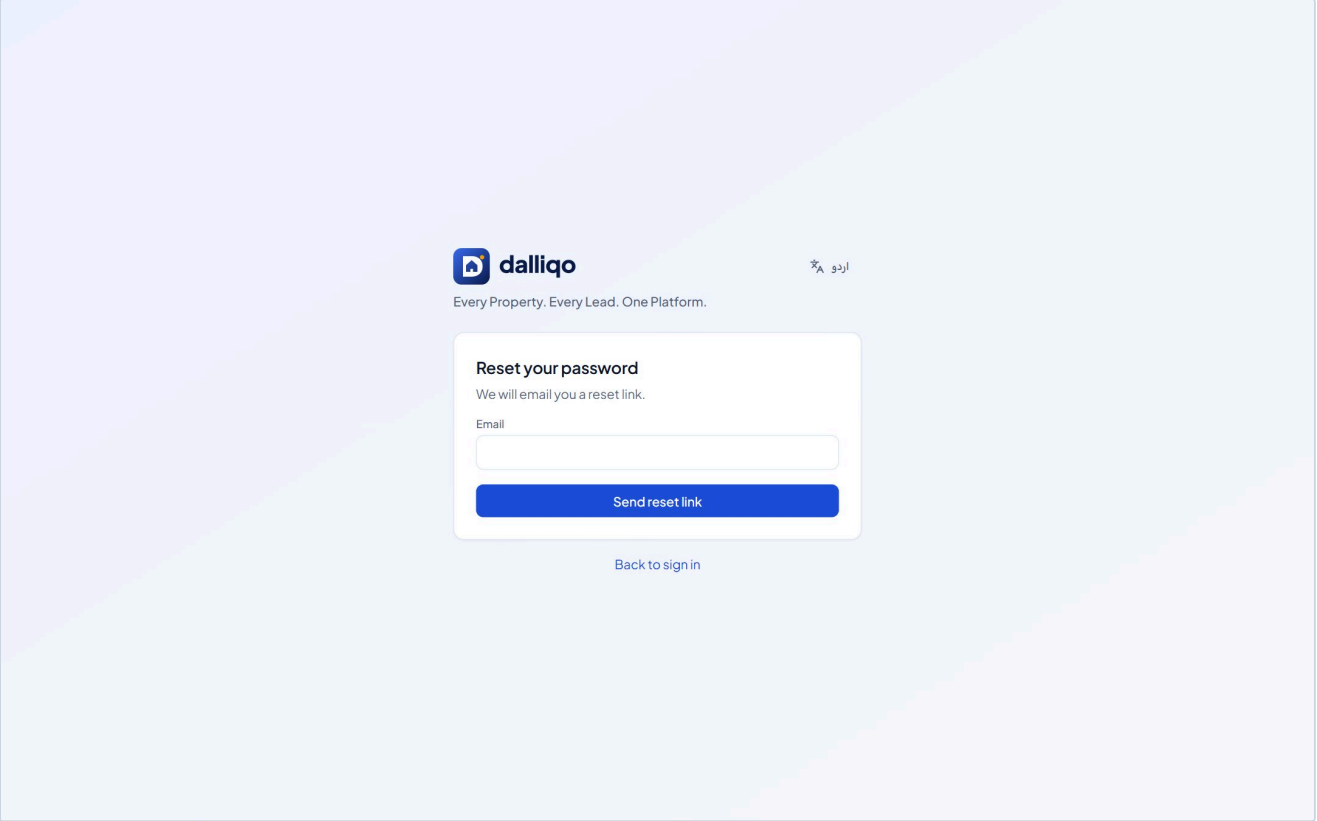

Figure 3: Requesting a password reset link

2.4 Your profile, language and theme

Open **Settings** from the left menu. On the **Profile** tab you can update your name and mobile number. The language button at the top of every page switches between English and اردو (Urdu); the sun/moon button switches between light, dark and system theme. Your choice is remembered on your account.

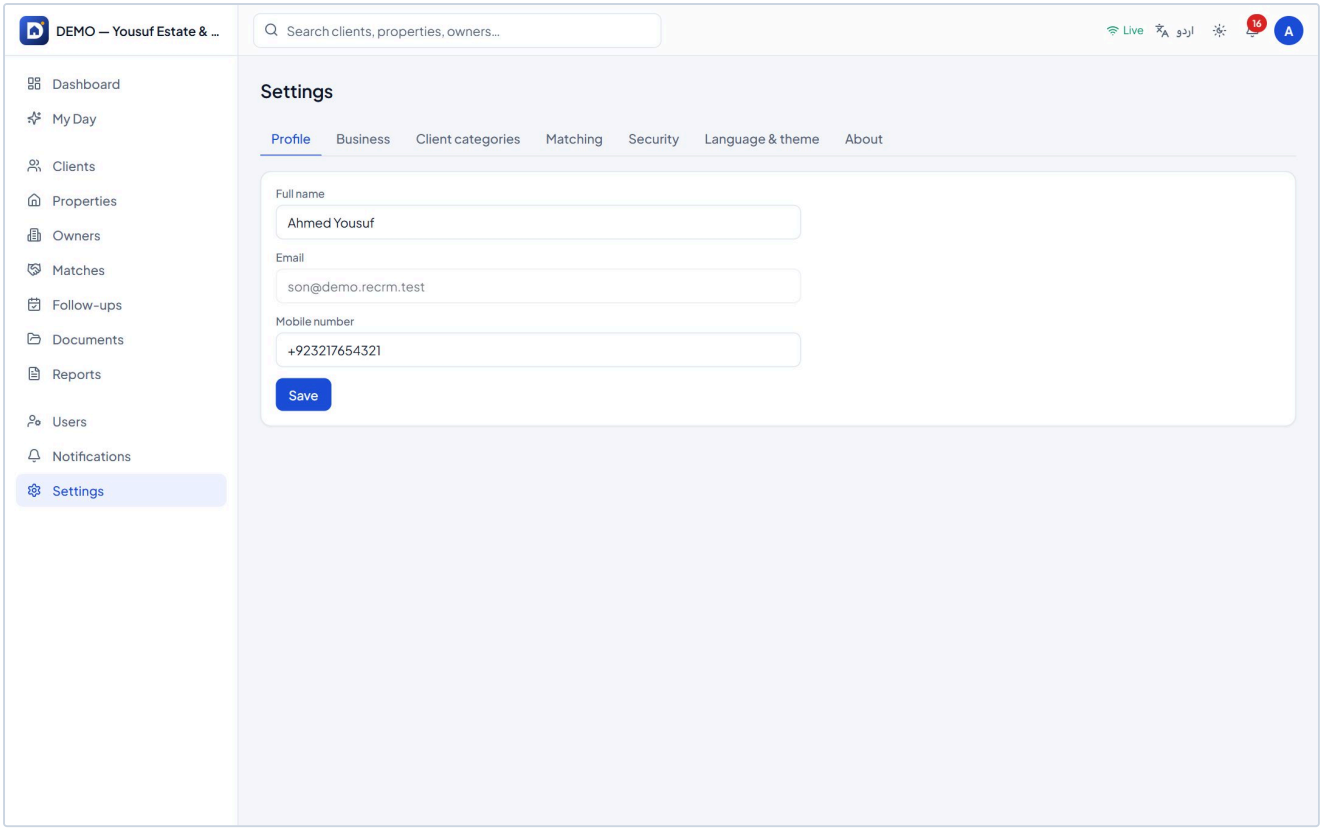

Figure 4: Settings — your profile

On **Settings → Security** you can change your password and see the devices where you are signed in. Use **Sign out** on a device you no longer use (for example a lost phone).

CHAPTER 3

Your dashboard and daily workspace

3.1 Dashboard

The dashboard opens after you sign in. Every number is calculated live from the business's records; click a card to open the matching list.

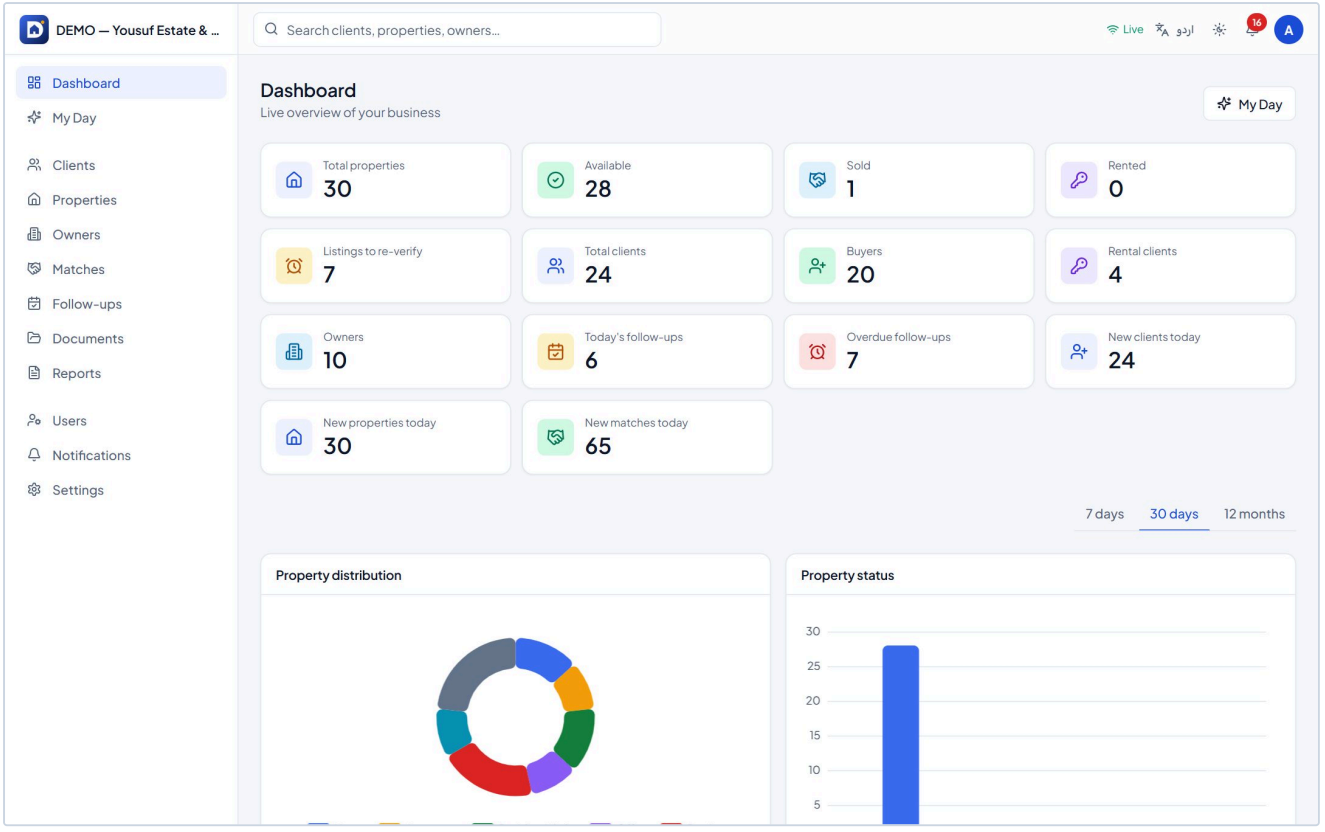

Figure 5: The dashboard

Card	What it means
Total properties	All properties in the business (not deleted).
Available	Properties you can still offer.
Sold / Rented	Closed deals.
Listings to re-verify	Available properties whose availability nobody has confirmed with the owner in the last 30 days. Click to open the list and confirm them.
Total clients · Buyers · Rental clients	Clients by purpose.
Owners	Clients in the "Property Owner" category.

Card	What it means
Today's follow-ups · Overdue follow-ups	Calls, meetings and visits due today, and those whose time has passed without being done.
New clients / properties / matches today	What was added today (Karachi time).

3.2 Analytics

Below the cards are charts for the last 7 days, 30 days or 12 months (choose with the tabs above the charts): property types, property status, client categories, follow-up performance, new records and match quality.

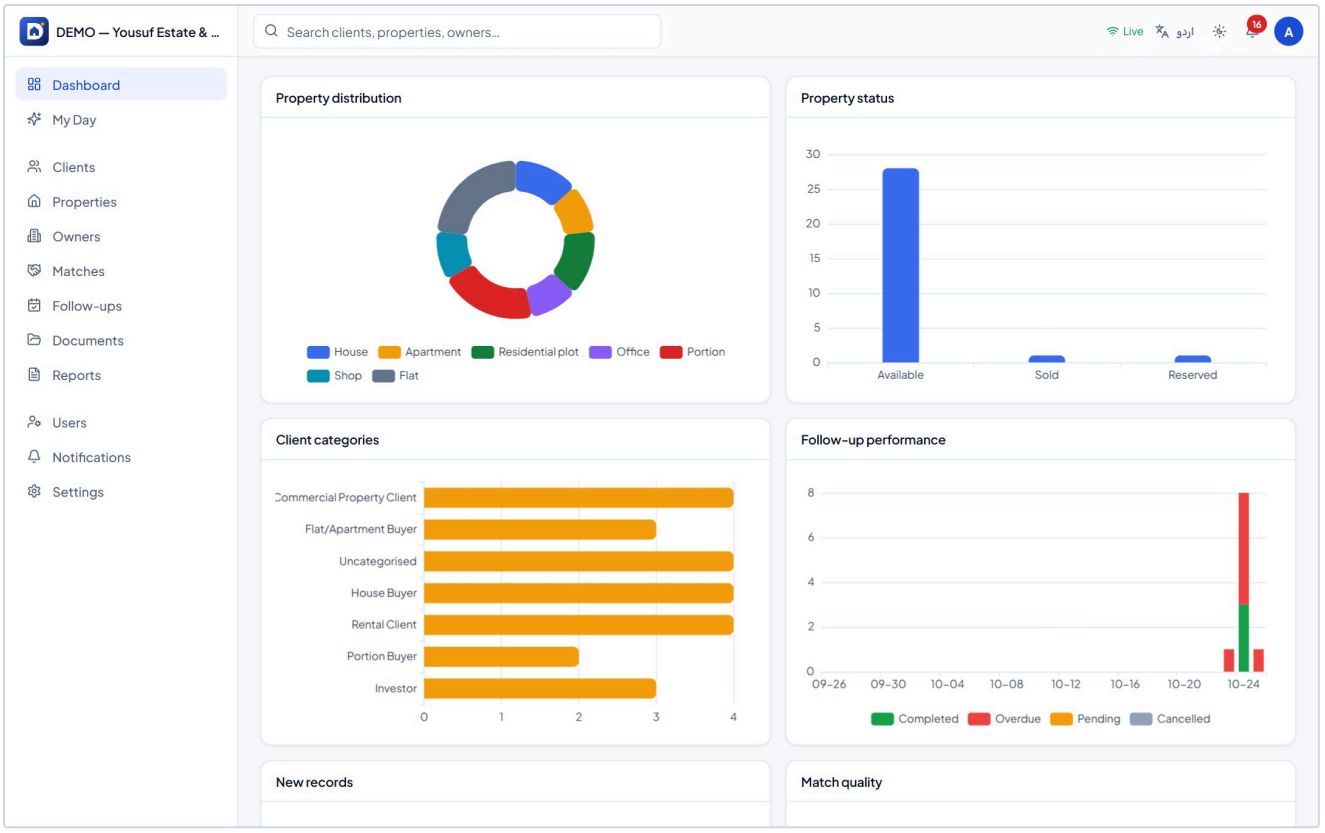

Figure 6: Dashboard analytics

Lead sources & conversion shows where clients came from (WhatsApp, phone, referral, walk-in, portal, social media) and how many became deals (won), are still active, or were lost.
Team performance lists each team member's completed follow-ups in the period, follow-ups overdue right now (in red) and active clients assigned to them.

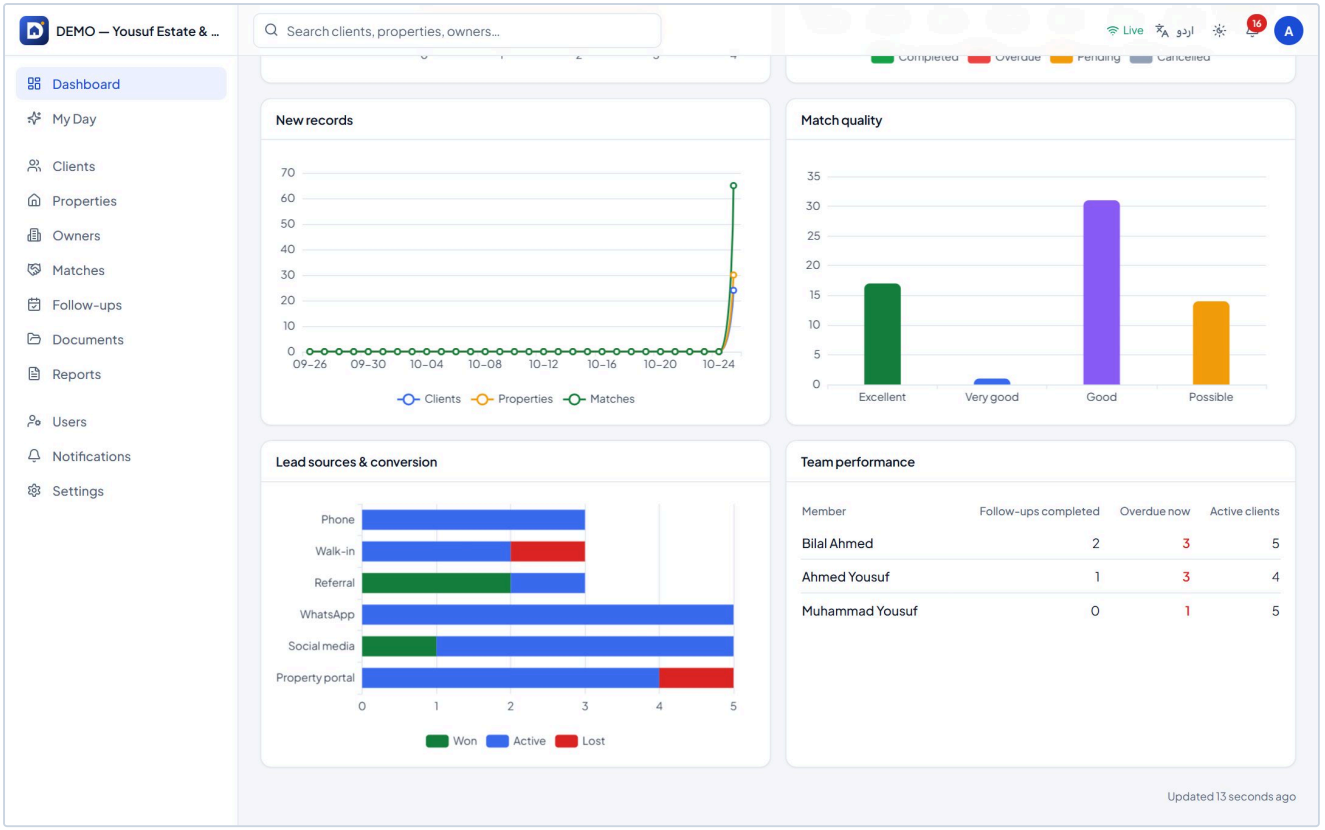

Figure 7: Lead sources & conversion, and team performance

> **Tip.** Use Lead sources to decide where to spend on advertising, and Team performance in the weekly team meeting — look first at the red "overdue" numbers.

3.3 My Day

My Day is your daily to-do list: today's follow-ups, overdue follow-ups, today's meetings, property visits, and the newest clients, properties and matches. Start every morning here.

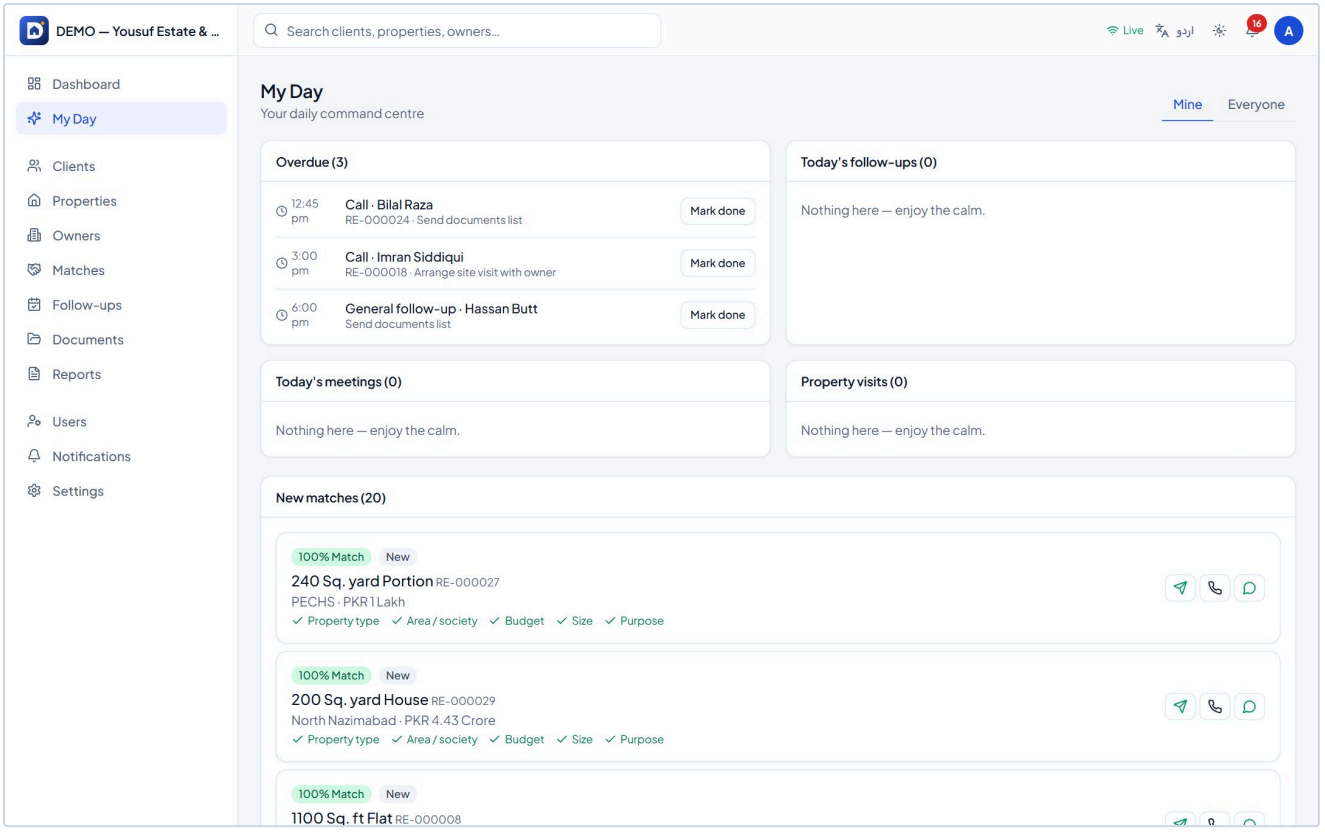

Figure 8: My Day — the daily workspace

Click **Mark done** on a follow-up once it is finished.

3.4 Global search

The search box at the top of every page looks through clients (name, mobile, WhatsApp), properties (ID such as RE-000012, society, block) and owners as you type. Click a result to open it.

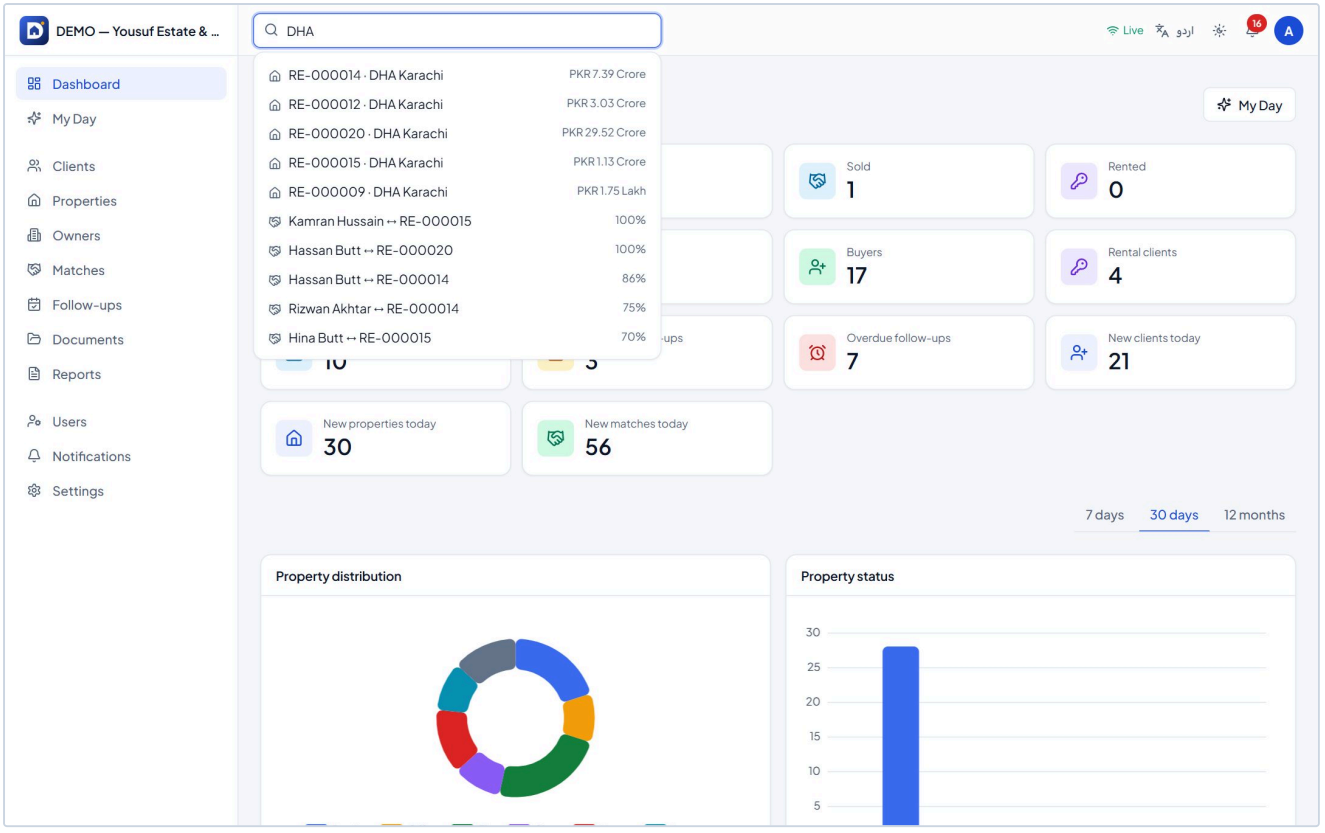

Figure 9: Searching across clients, properties and owners

CHAPTER 4

Working with clients

4.1 Client list

Open **Clients**. Search by name or mobile number, filter by category, status, purpose, property type, assigned person, area and budget, and sort the list. Click a client to open their page.

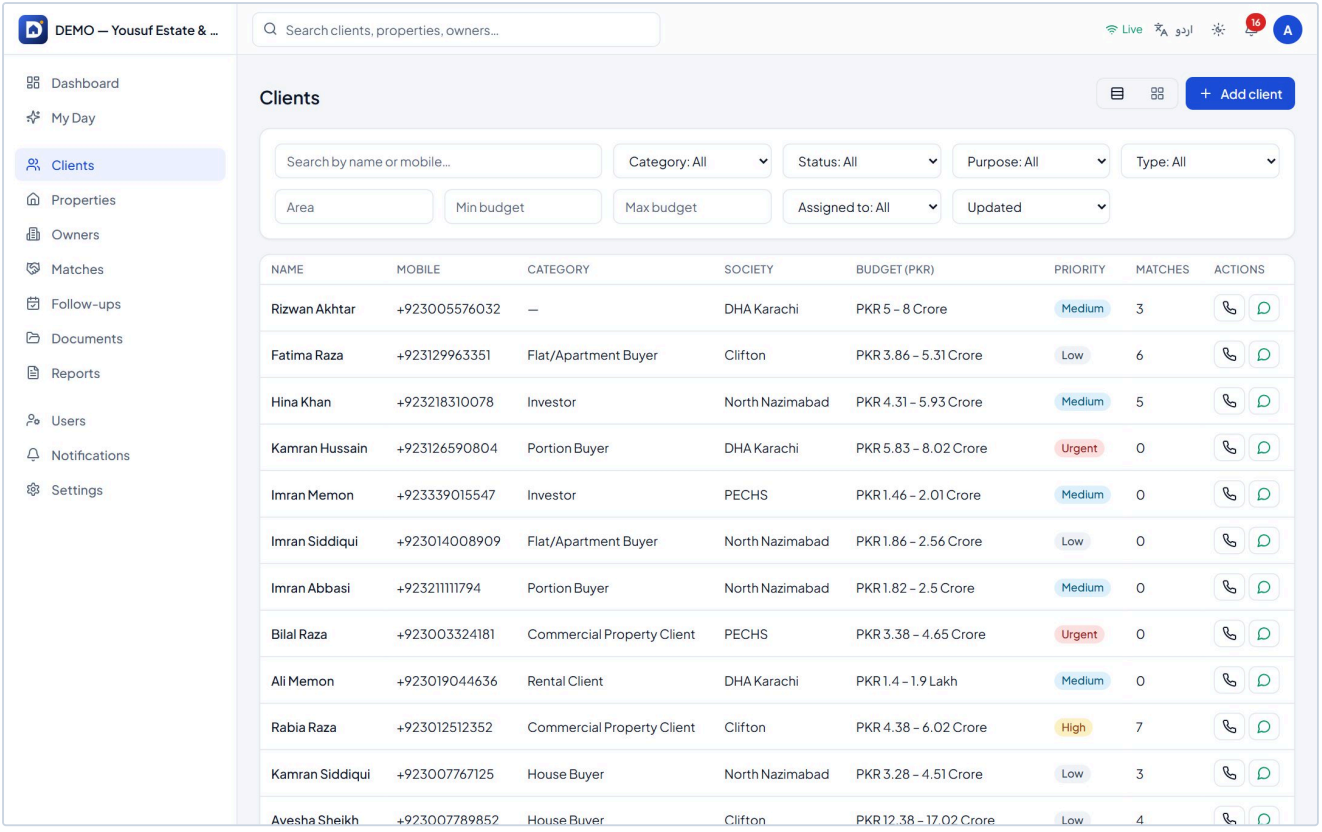

Figure 10: The client list with filters

4.2 Adding a client

Purpose	Record a new buyer, tenant, seller or investor with what they are looking for, so the system can match them.
Where to find it	**Clients** → **Add client**.
Before you start	Search first by mobile number to make sure the client is not already in the system.

Step by step

1. Click **Add client**. A form opens on the right.
2. Fill in the client's name and mobile number.
3. Choose the category, source (how they reached you), priority and the team member responsible.

4. Under **Requirements**, choose Purchase or Rental, click the property types they want, and enter preferred societies/areas/blocks, size range and budget range.
5. Click **Save**.

Fields

Field	Required?	What to enter
Full name	**Required**	At least 2 characters
Mobile number	**Required**	Pakistani number in any common format (0300 1234567, +92 300 1234567); it is saved as +923001234567
WhatsApp / alternate number	Optional	Leave WhatsApp empty if it is the same as mobile
Email, address	Optional	
Category	Optional	Plot buyer, house buyer, rental client, investor, etc.
Status, priority	Optional	Defaults: Active, Medium
Source	Optional	WhatsApp, phone, walk-in, referral, portal, social media — needed for the lead-source report
Assigned to	Optional	Who follows this client up
Requirements	Optional	Purpose, property types, societies (comma-separated), size and budget ranges. More than one requirement can be added
Notes	Optional	Anything else worth remembering

What happens after saving	The client page opens. Matching properties are calculated immediately and colleagues see the new client straight away.
How to check it worked	The client appears at the top of the client list; the Matching properties tab shows suitable properties (if any fit).
Common mistakes	Typing the budget in lakh or crore words — enter the full amount in rupees, e.g. 15000000 for 1.5 crore. Leaving property types empty means “any type”.
Permissions and limits	You can add and edit clients but not delete them.

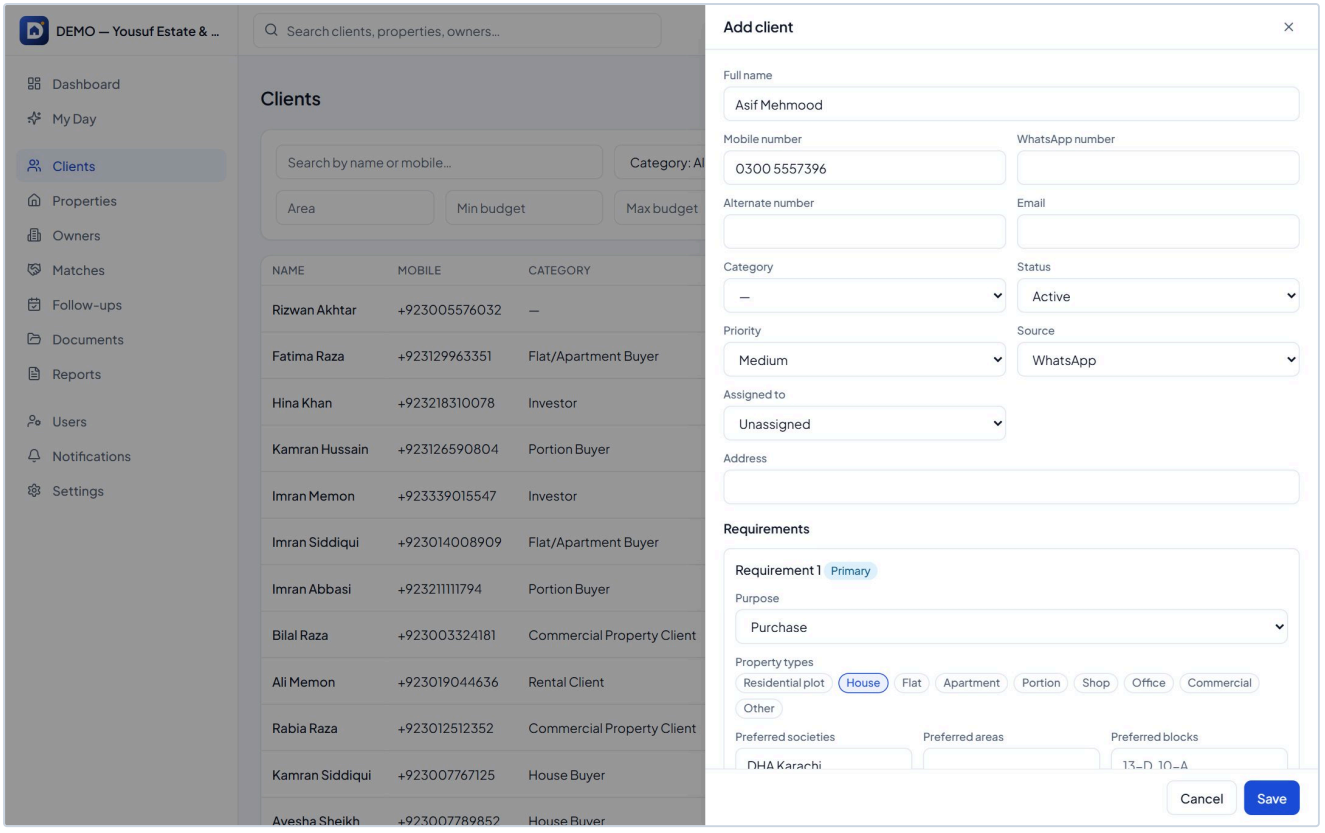

Figure 11: Adding a client — contact details

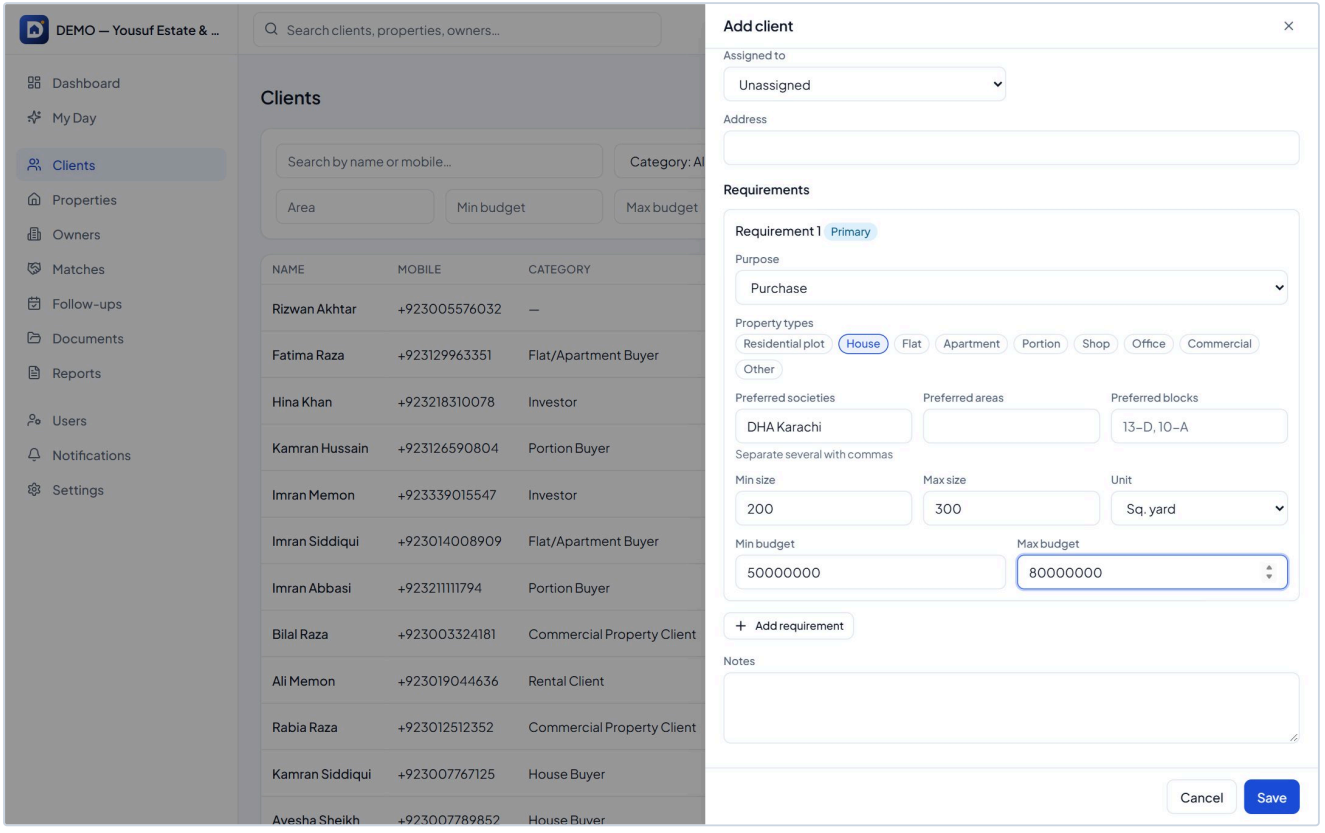

Figure 12: Adding a client — requirements (purpose, type, location, size, budget)

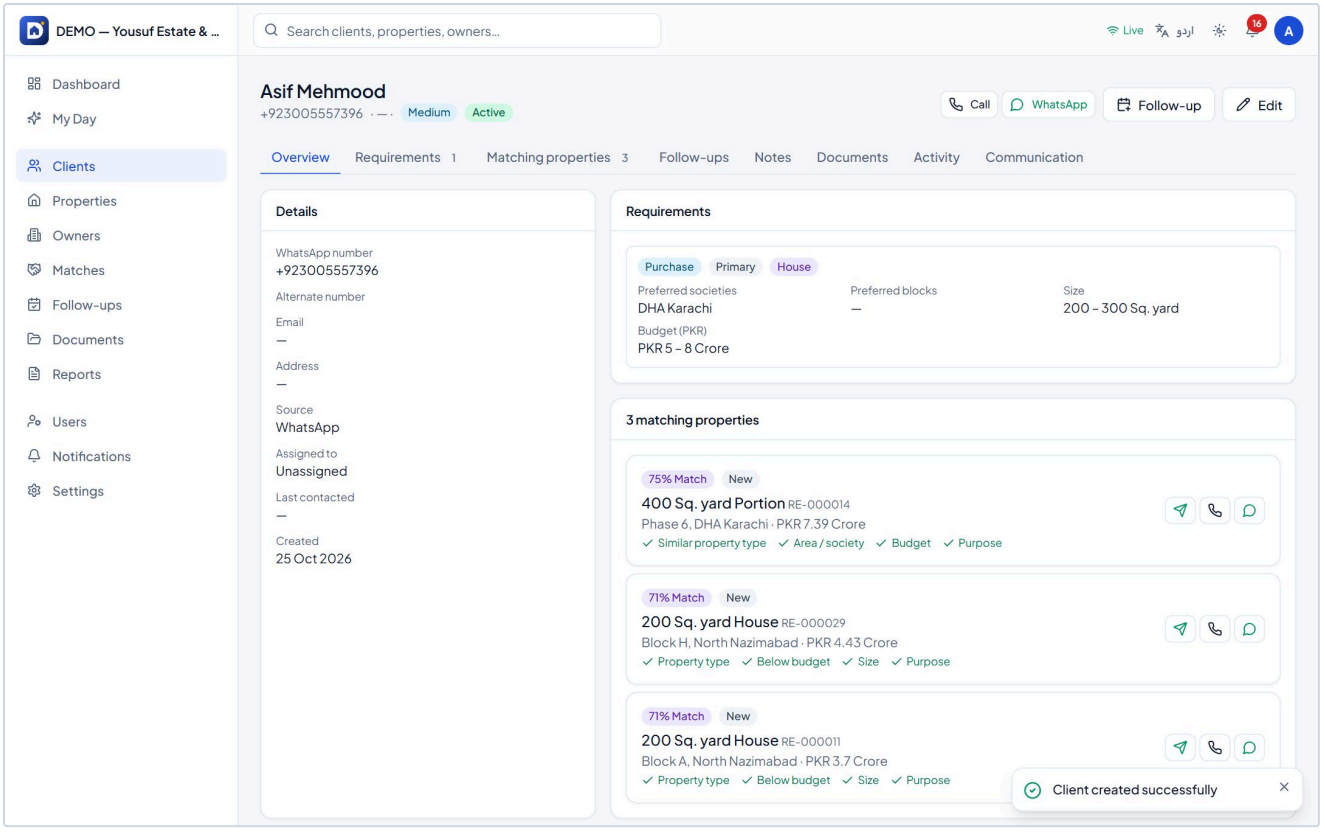

Figure 13: The new client's page right after saving

4.3 Duplicate warning

If another client already uses the same mobile, WhatsApp or alternate number, the form stops and shows **Possible duplicate client** with a link to the existing record. Usually you should open the existing client and update it instead. If it really is a different person (for example two family members sharing one phone), click **Save anyway**.

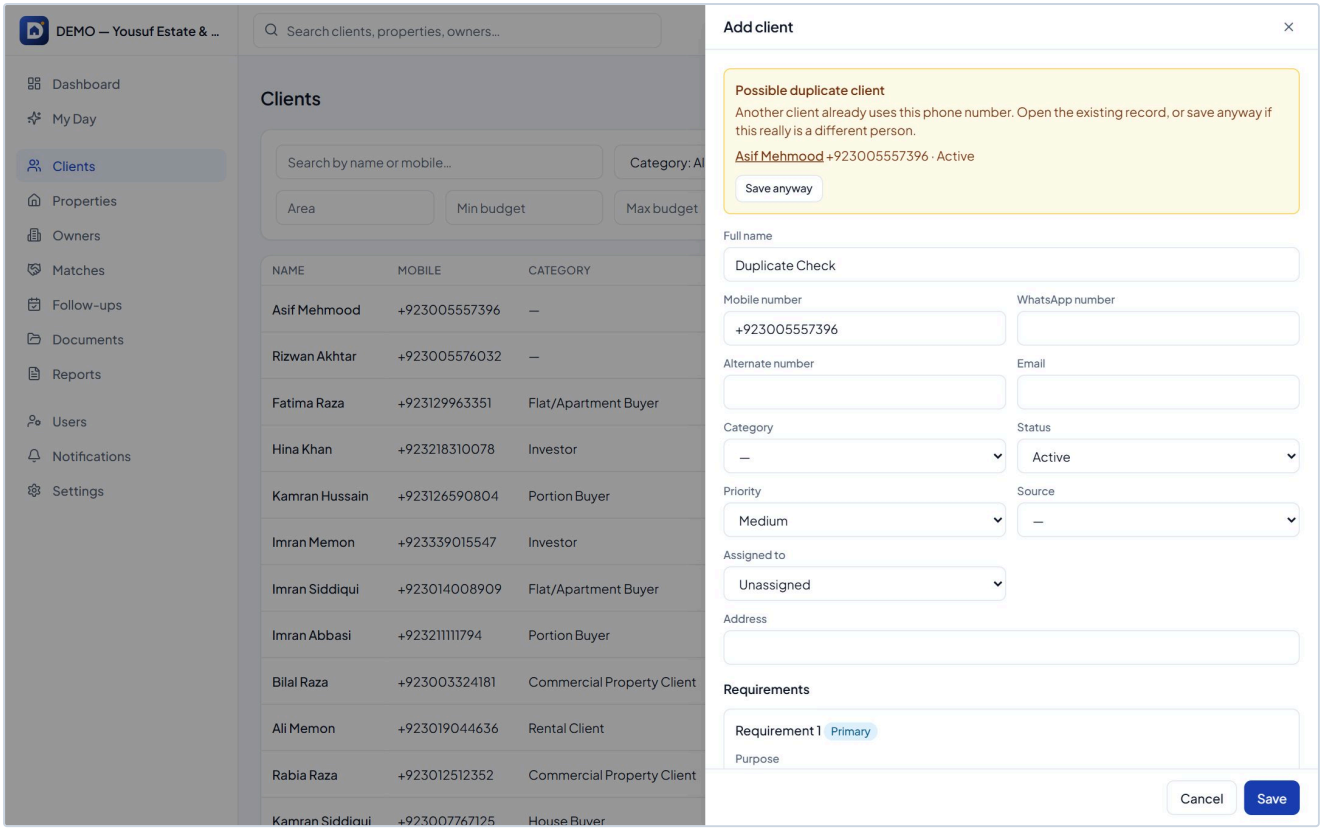

Figure 14: The duplicate-client warning

> **Note.** On the mobile app the same check is done on the phone, even without internet.

4.4 The client page

The client page has tabs: Overview, Requirements, Matching properties, Follow-ups, Notes, Documents, Activity and Communication. The buttons at the top call the client, open WhatsApp, send an SMS or e-mail, and create a follow-up. Calls and WhatsApp messages started from here are recorded on the client's timeline.

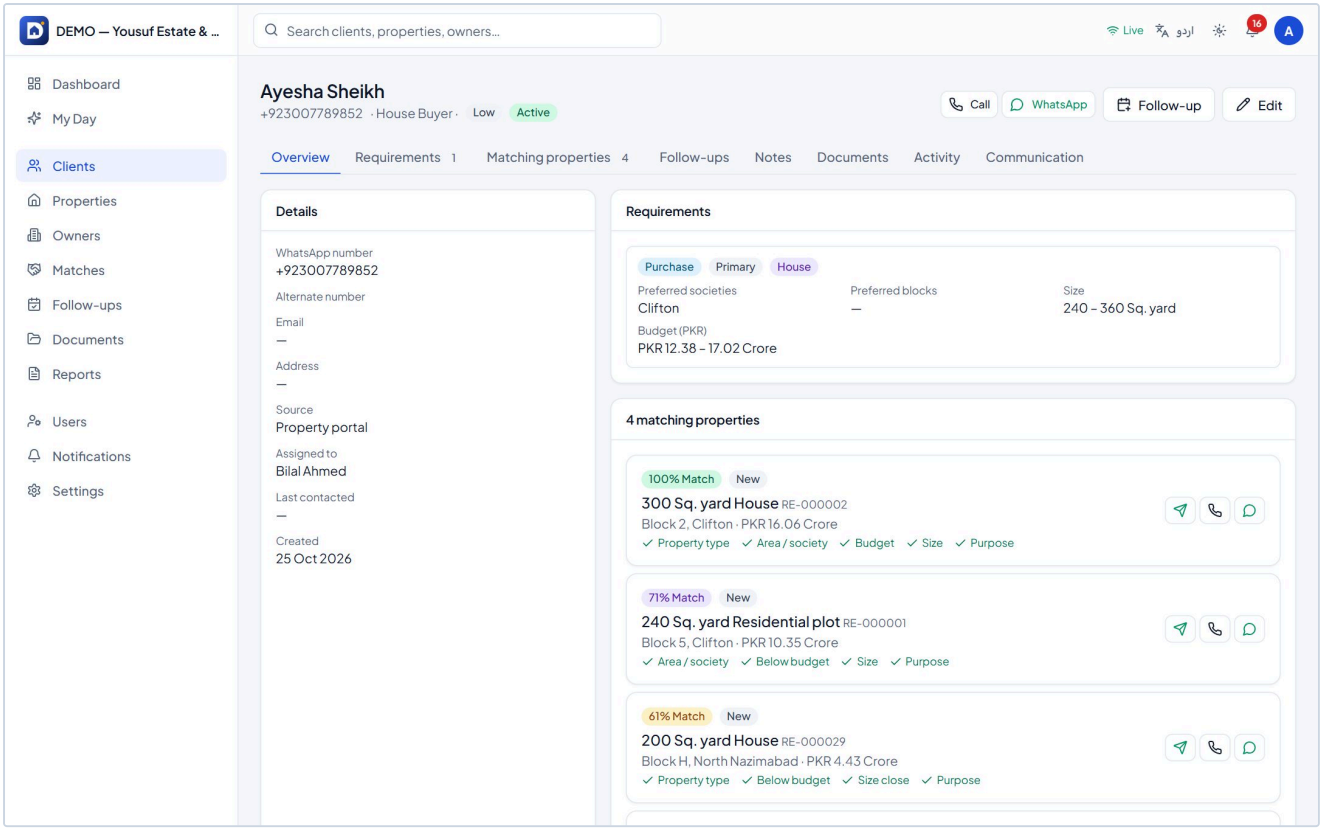

Figure 15: A client's overview

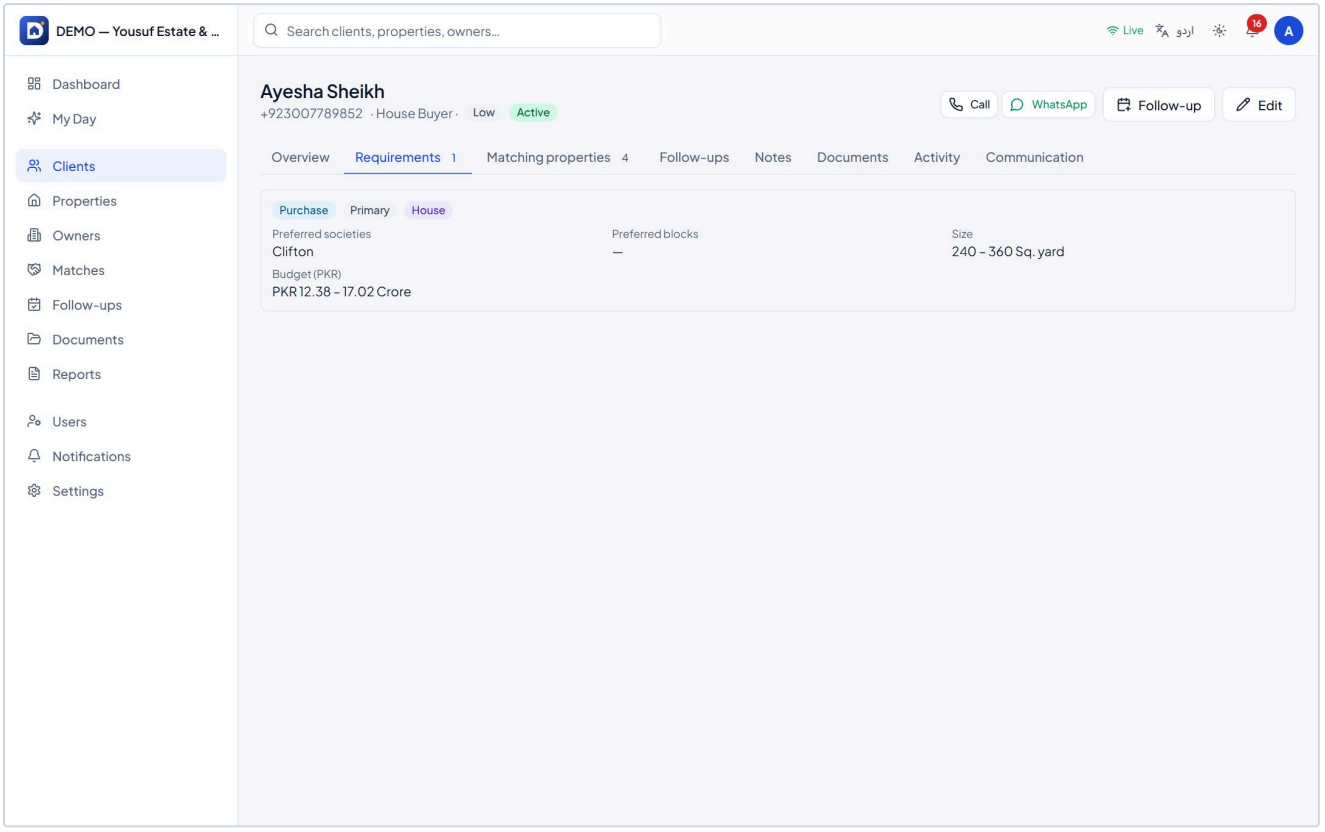

Figure 16: The Requirements tab

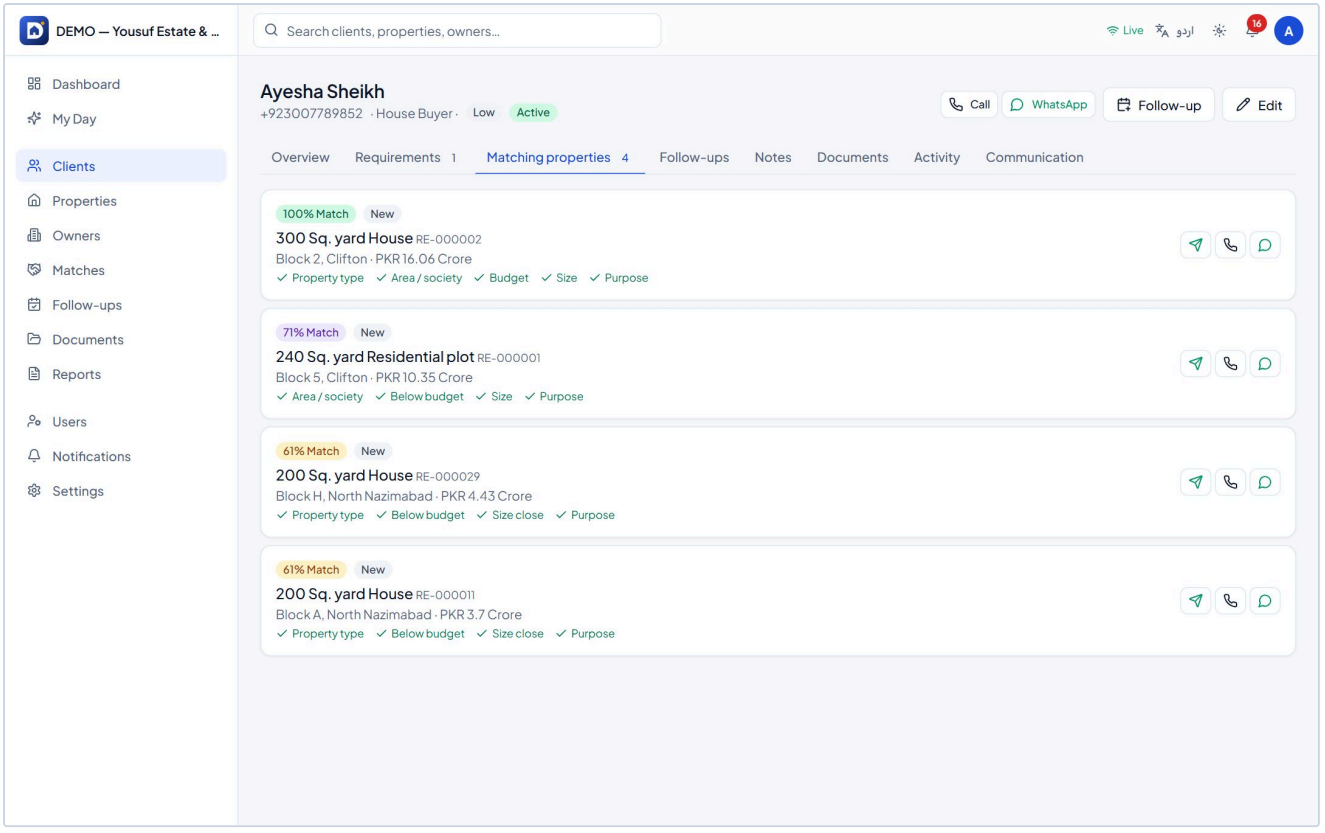

Figure 17: Matching properties for the client, with score and reasons

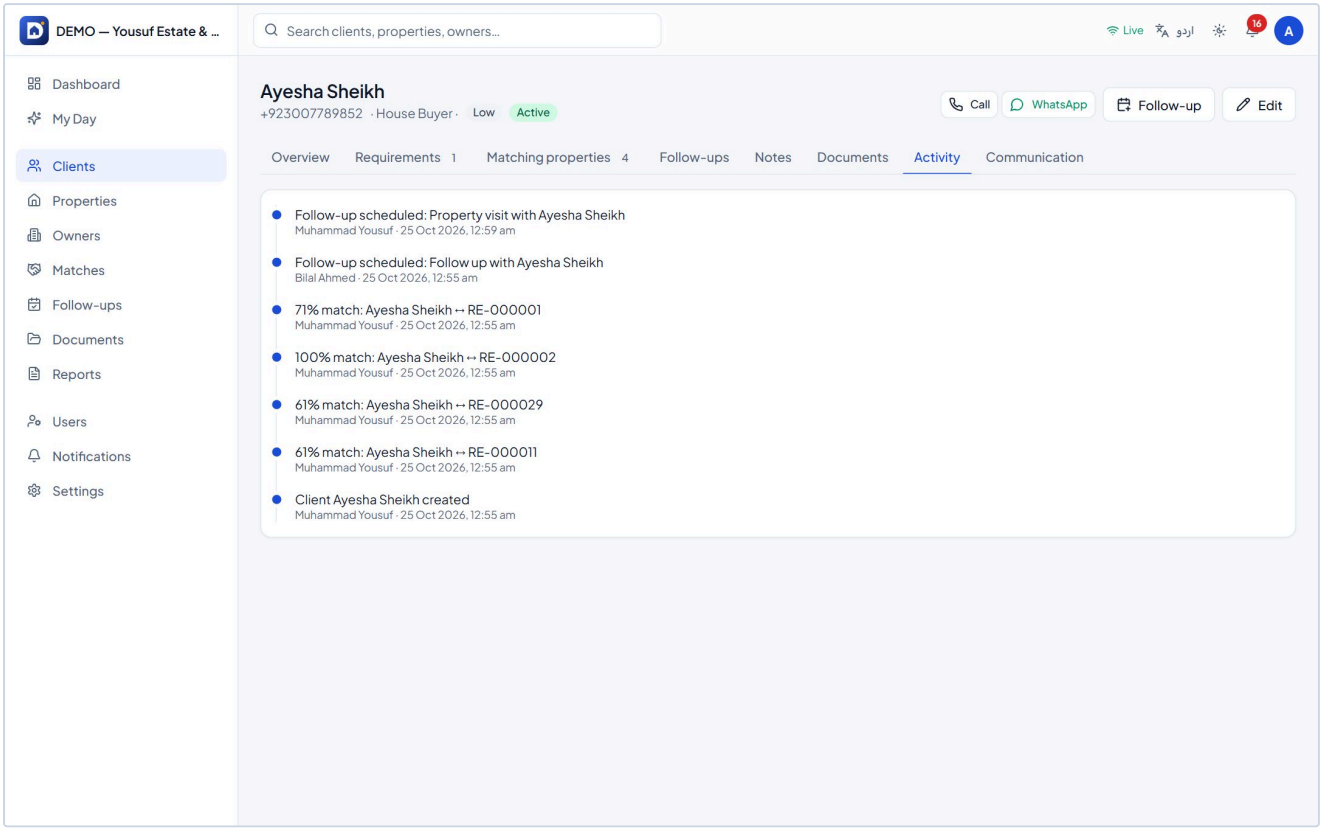

Figure 18: The client's activity timeline

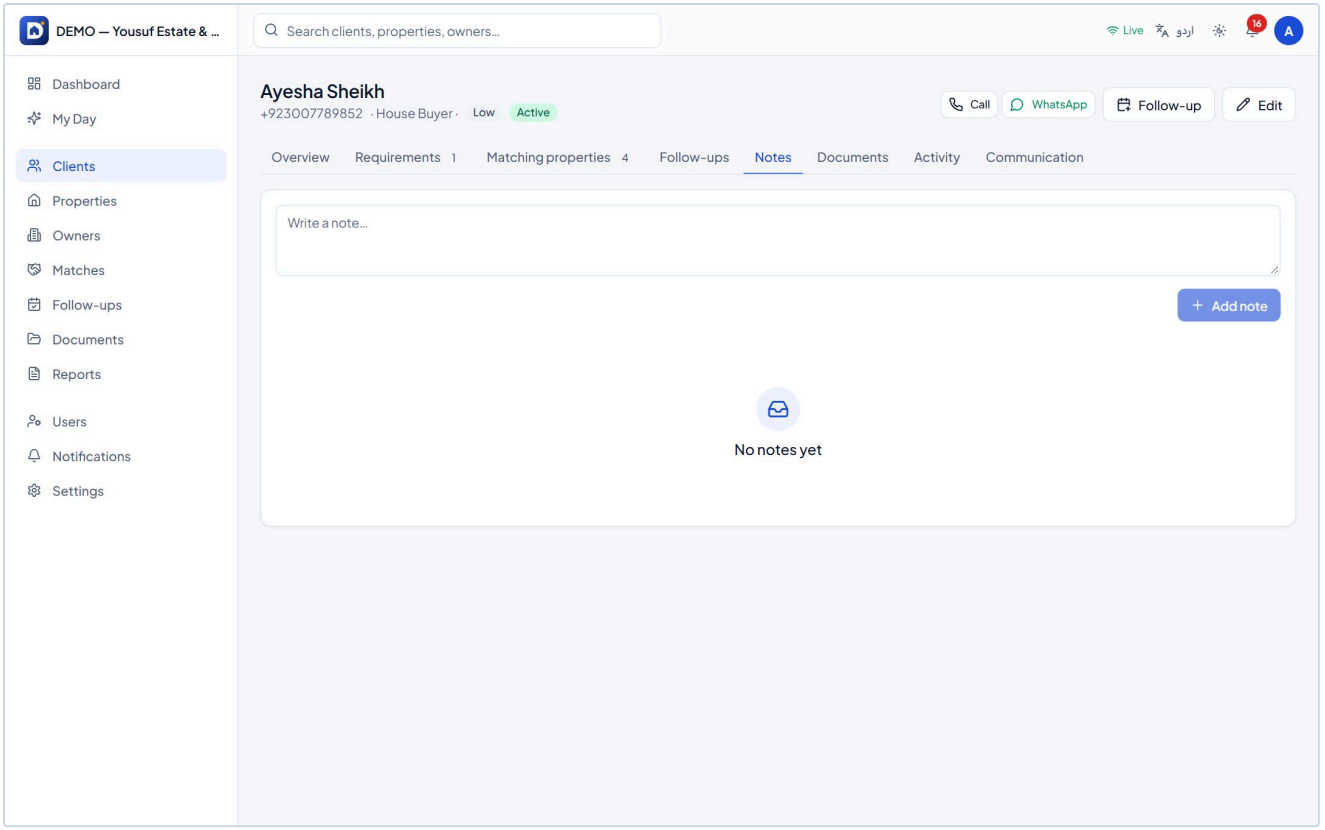

Figure 19: Notes on a client

To add a note, open the **Notes** tab, type the note and click **Add note**. You can edit or delete your own notes.

4.5 Updating and archiving a client

Open the client and click **Edit** to change details or requirements; matches are recalculated as soon as you save. When a client is no longer active, change their **Status** to On hold, Closed (won), Closed (lost) or Inactive rather than deleting them — this keeps the history and feeds the conversion report.

Deleting clients is reserved for the owner and managers.

CHAPTER 5

Working with properties

5.1 Property list

Open **Properties**. Switch between the photo grid and the table with the buttons at the top right. Filter by type, status, listing purpose, area, society, block, price, size, verification and owner. Each card shows the property ID, size and type, location, asking price, status and how many clients match.

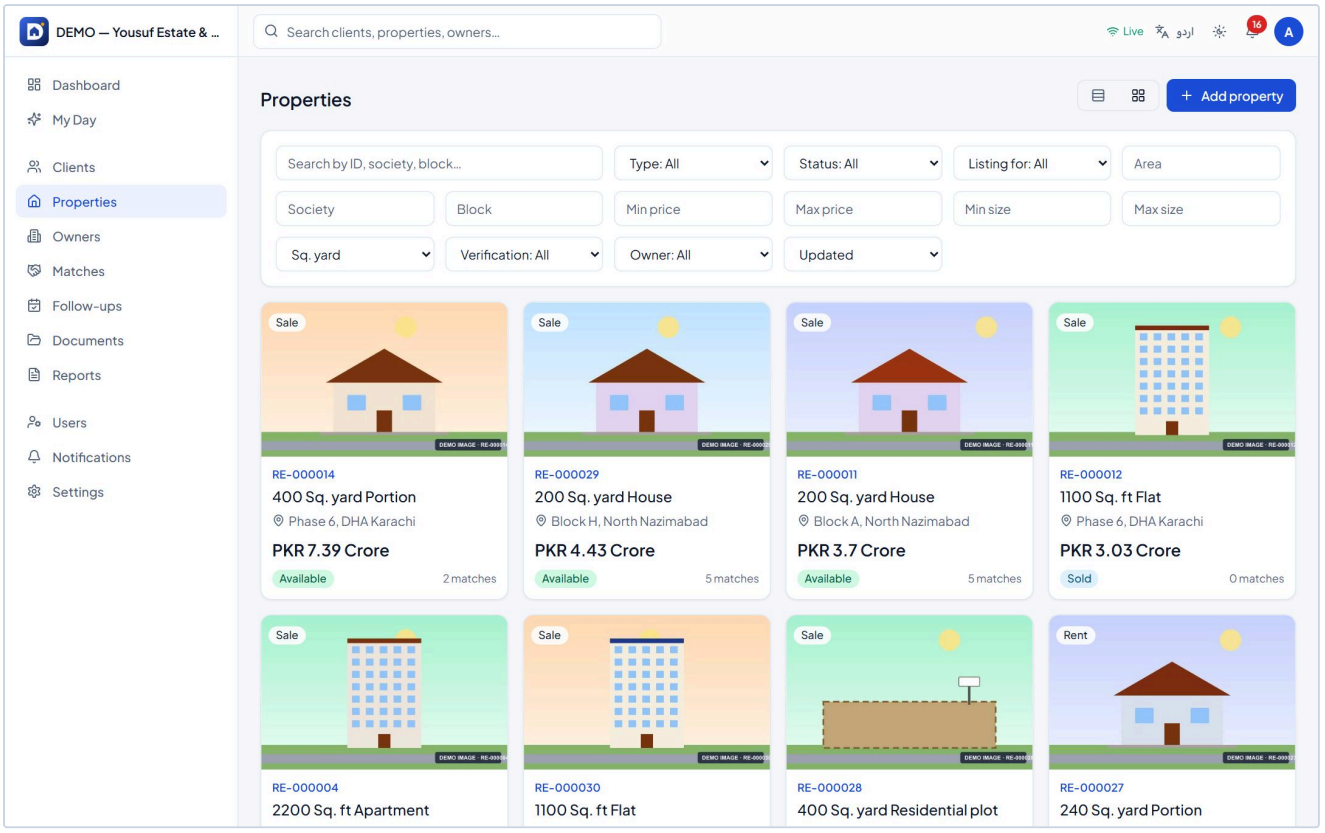

Figure 20: The property list (grid view)

5.2 Adding a property

Purpose	Add a listing so it can be matched with clients and shared.
Where to find it	**Properties** → **Add property**.
Before you start	Add the owner first (Owners chapter) if you want to link them.

Step by step

1. Click **Add property**.
2. Choose the property type and whether it is for sale or rent.
3. Enter the location (area, society, block, street, plot number) and size with its unit.
4. Enter the asking price and, if known, the minimum and expected final price.

5. Choose the owner, add bedrooms/bathrooms/floors and a description.
6. Optionally set the location on the map, then click **Save**.

Fields

Field	Required?	What to enter
Property type	**Required**	Residential plot, house, flat, apartment, portion, shop, office, commercial, other
Size and unit	**Required**	Sq. yard, sq. ft, sq. metre, marla or kanal
Asking price	**Required**	Full amount in rupees (monthly rent for rentals)
Listing for	Optional	Sale (default) or Rent
Area, society, block, street, plot/unit no.	Optional	Fill these in — they drive matching and search
Minimum price, expected final price, negotiable	Optional	Kept for your negotiation; visible to staff who can view properties
Owner	Optional	Pick from the owners list
Bedrooms, bathrooms, floors, description	Optional	
Latitude / longitude	Optional	Set from the map picker

What happens after saving	A unique ID such as RE-000031 is given automatically. Matching clients are found immediately and their owners/agents may be notified about strong matches.
How to check it worked	Open the property: the ID appears at the top and the Matching clients tab lists suitable buyers or tenants.
Common mistakes	Writing the society in different spellings (e.g. “DHA” and “D.H.A”) — use the same spelling every time so matching works.

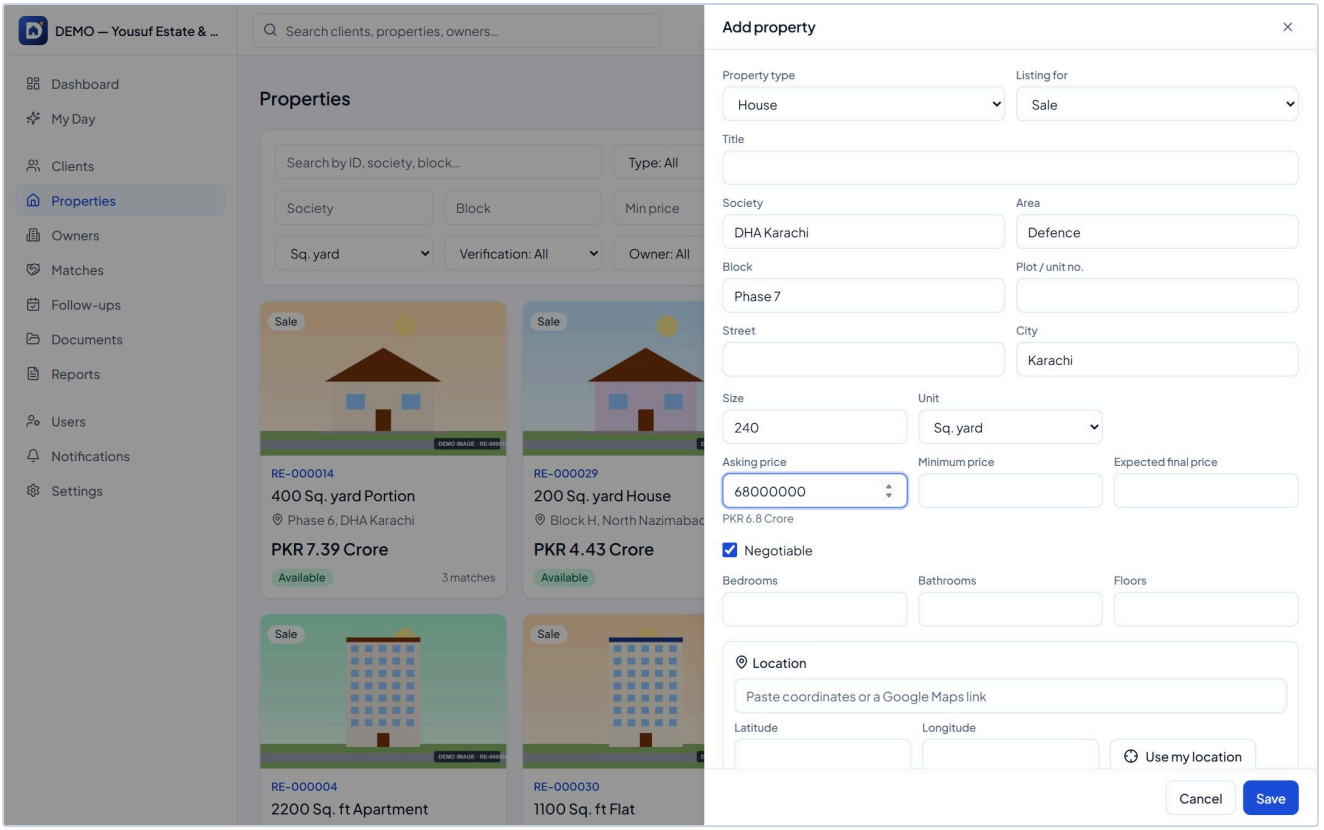

Figure 21: Adding a property

5.3 The property page

The top shows the ID, status and when availability was last confirmed. Tabs show the overview with a map, **Photos & videos**, **Matching clients**, follow-ups, documents, notes and activity. **WhatsApp** opens WhatsApp with the property summary ready to send; **Share** uses your device's share menu or copies the details.

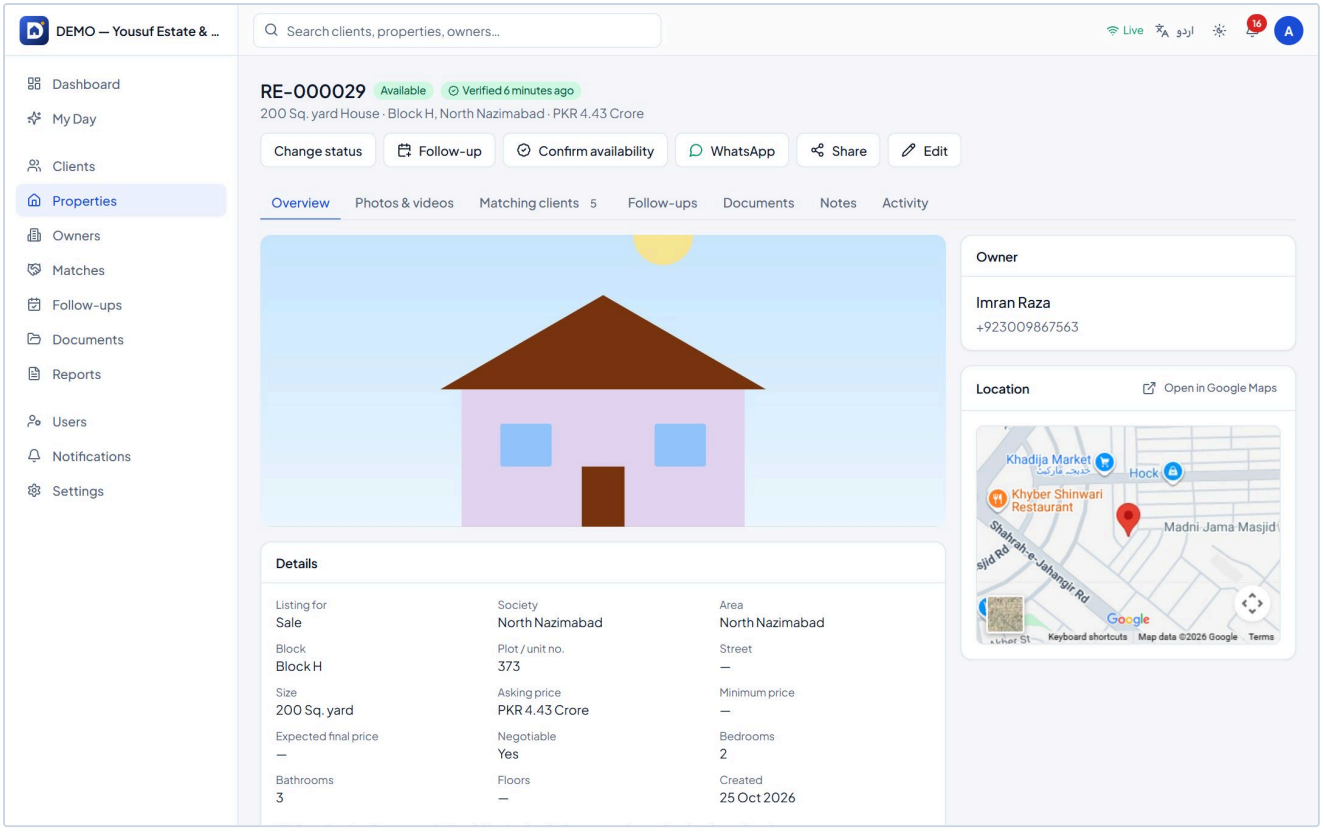

Figure 22: A property page

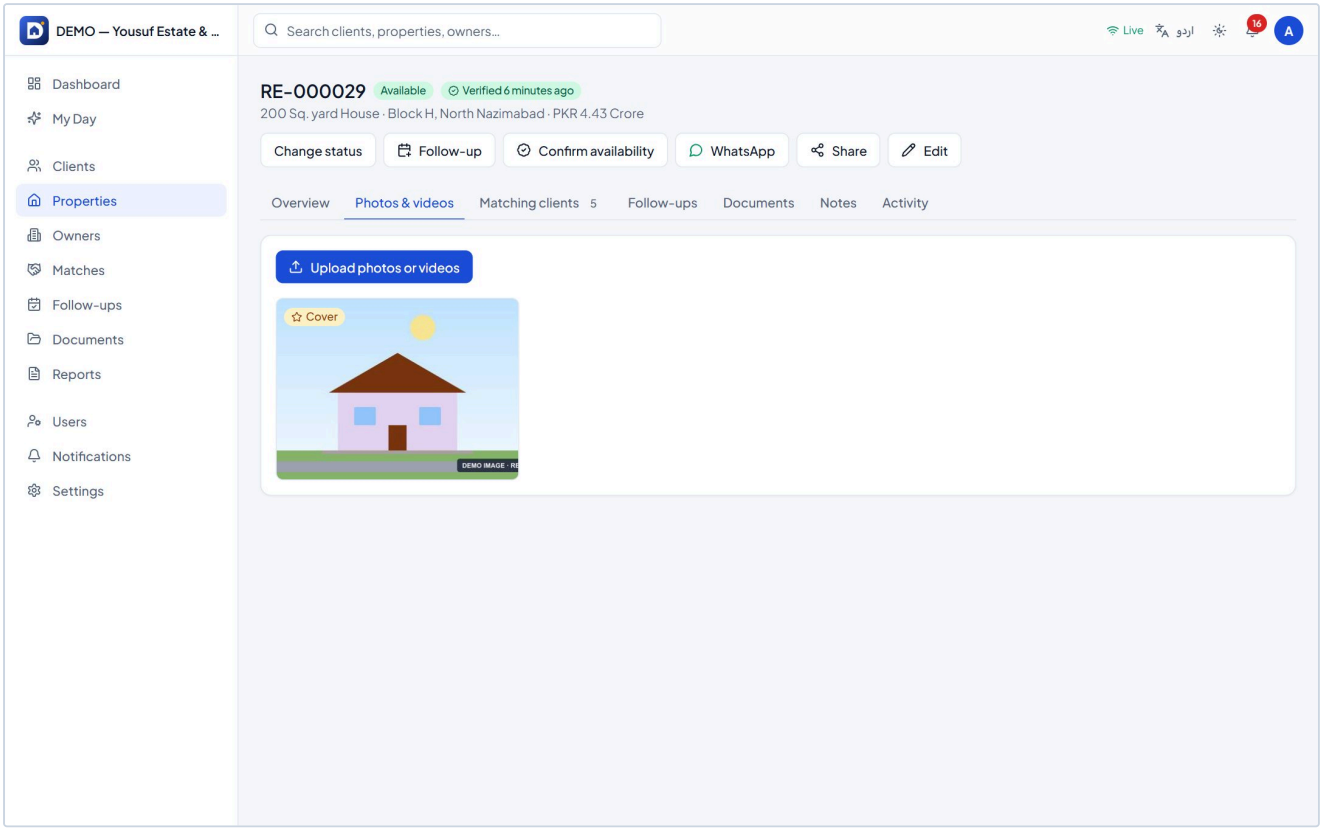

Figure 23: Photos and videos of a property

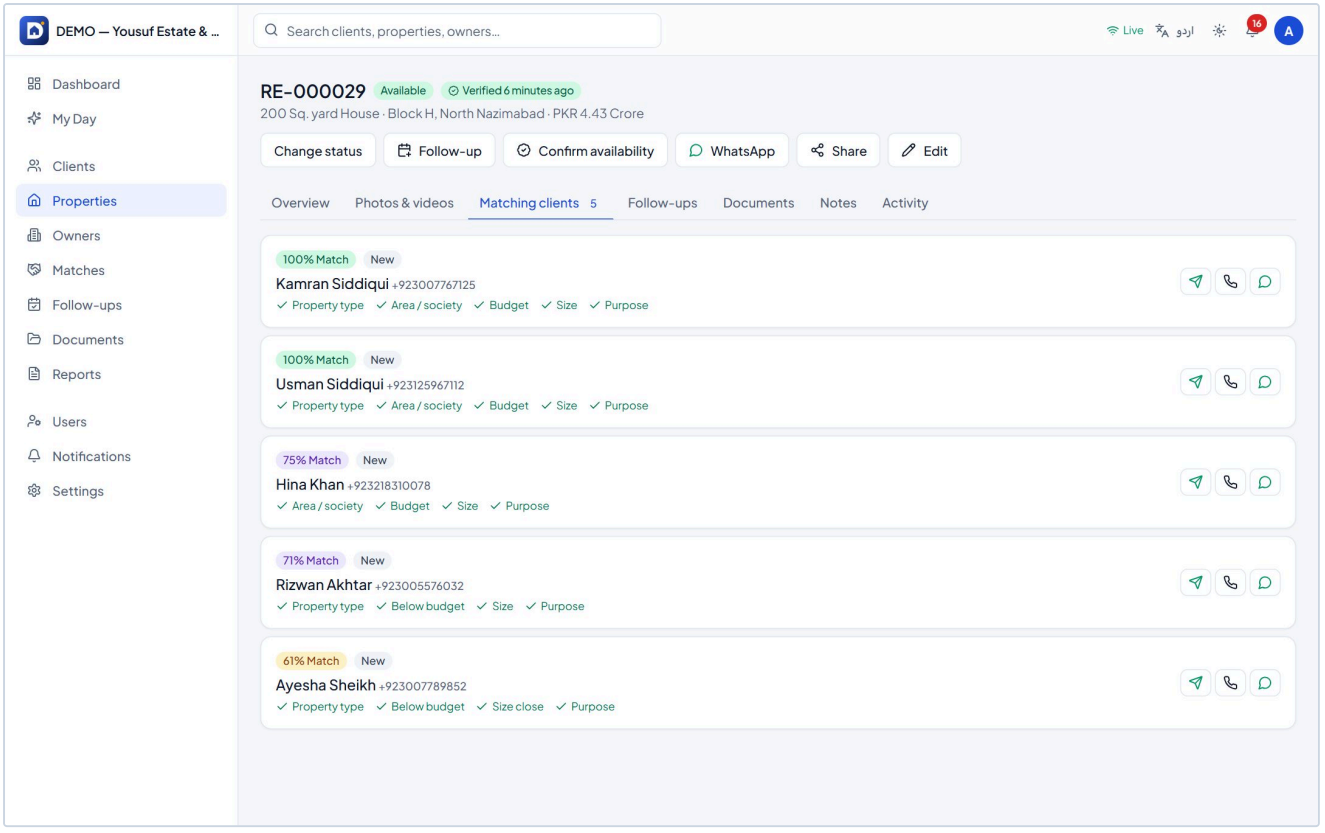

Figure 24: Clients matching a property

> **Note.** The pictures in the demo are clearly labelled illustrations ("DEMO IMAGE"), not real photographs.

5.4 Changing the status

Click **Change status**, choose the new status and optionally a reason (for example "Token received"). Every change is recorded on the property's timeline and in the audit log. When a property stops being available, its matches are marked "No longer available"; they come back if it becomes available again.

From	Can change to
Available	Reserved, Sold, Rented, Withdrawn, Inactive
Reserved	Available, Sold, Rented, Withdrawn, Inactive
Sold / Rented / Withdrawn	Available, Inactive
Inactive	Available

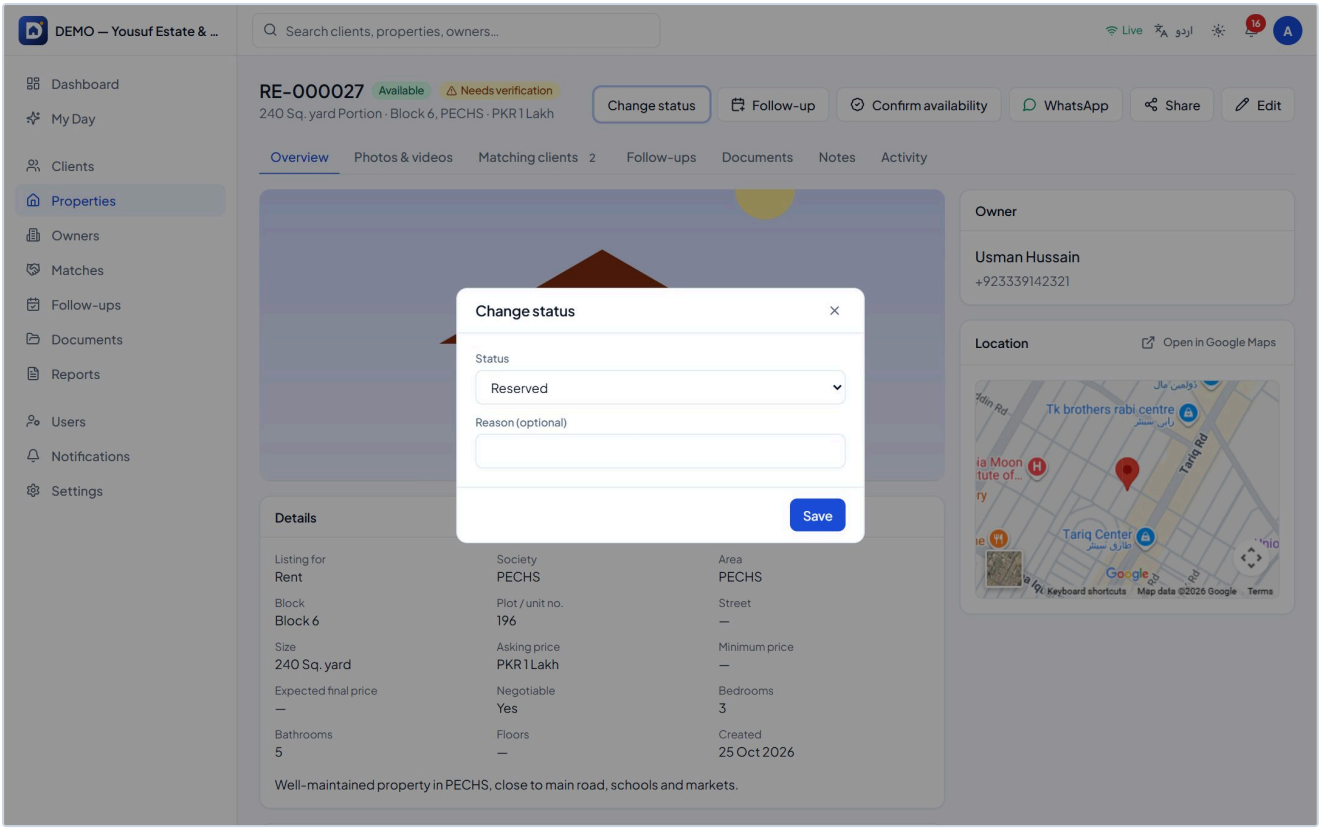

Figure 25: Changing a property's status

5.5 Confirming availability

Listings go out of date when owners sell elsewhere or change their price. Every property records when its availability was last confirmed. If nobody has confirmed an available property for 30 days it shows **Needs verification**, and the dashboard counts it under "Listings to re-verify".

1. Call the owner and confirm the property is still on offer at the listed price.
2. Open the property and click **Confirm availability**.
3. Add a short note (e.g. "Owner confirmed on phone, price unchanged") and confirm.
4. If the price changed, click Edit and update it; if it is no longer available, change the status.

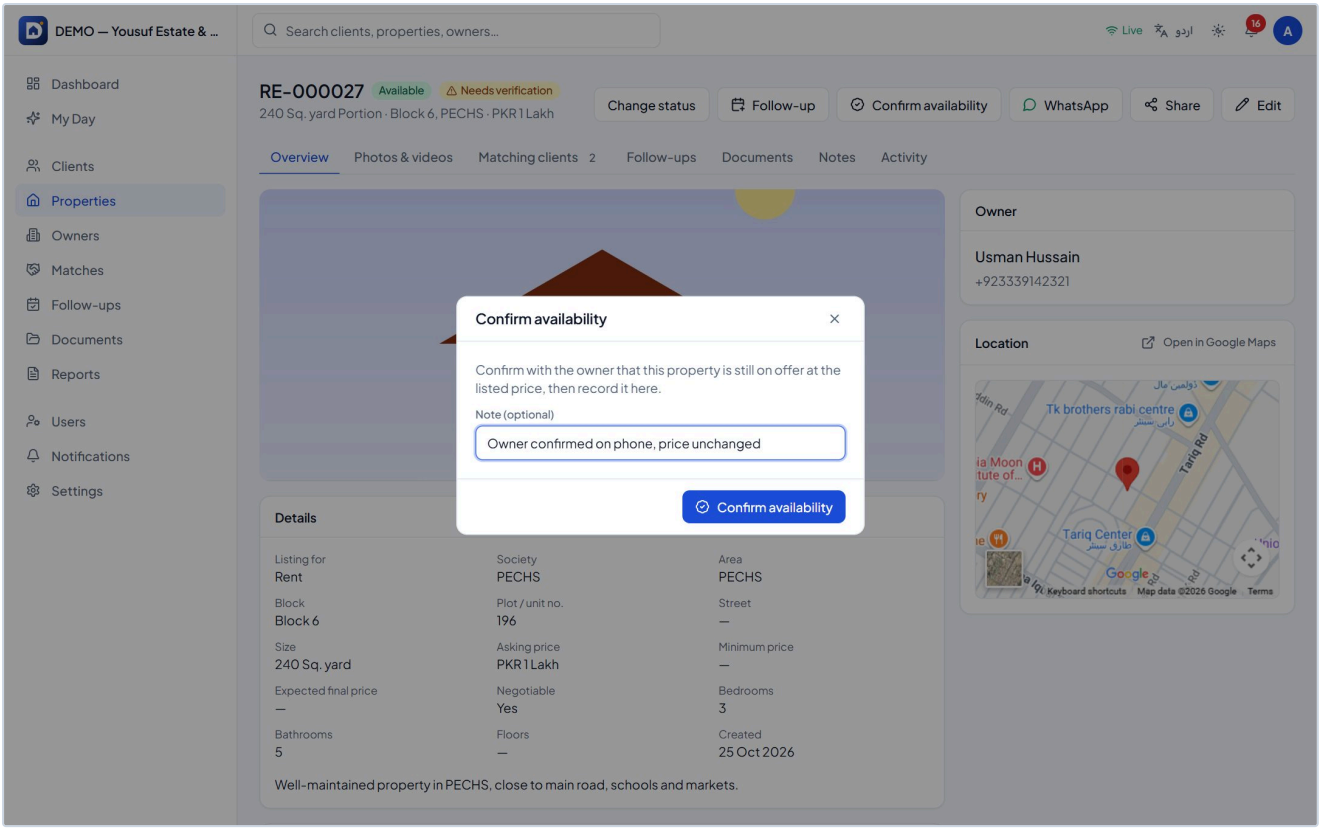

Figure 26: Confirming a listing's availability with a note

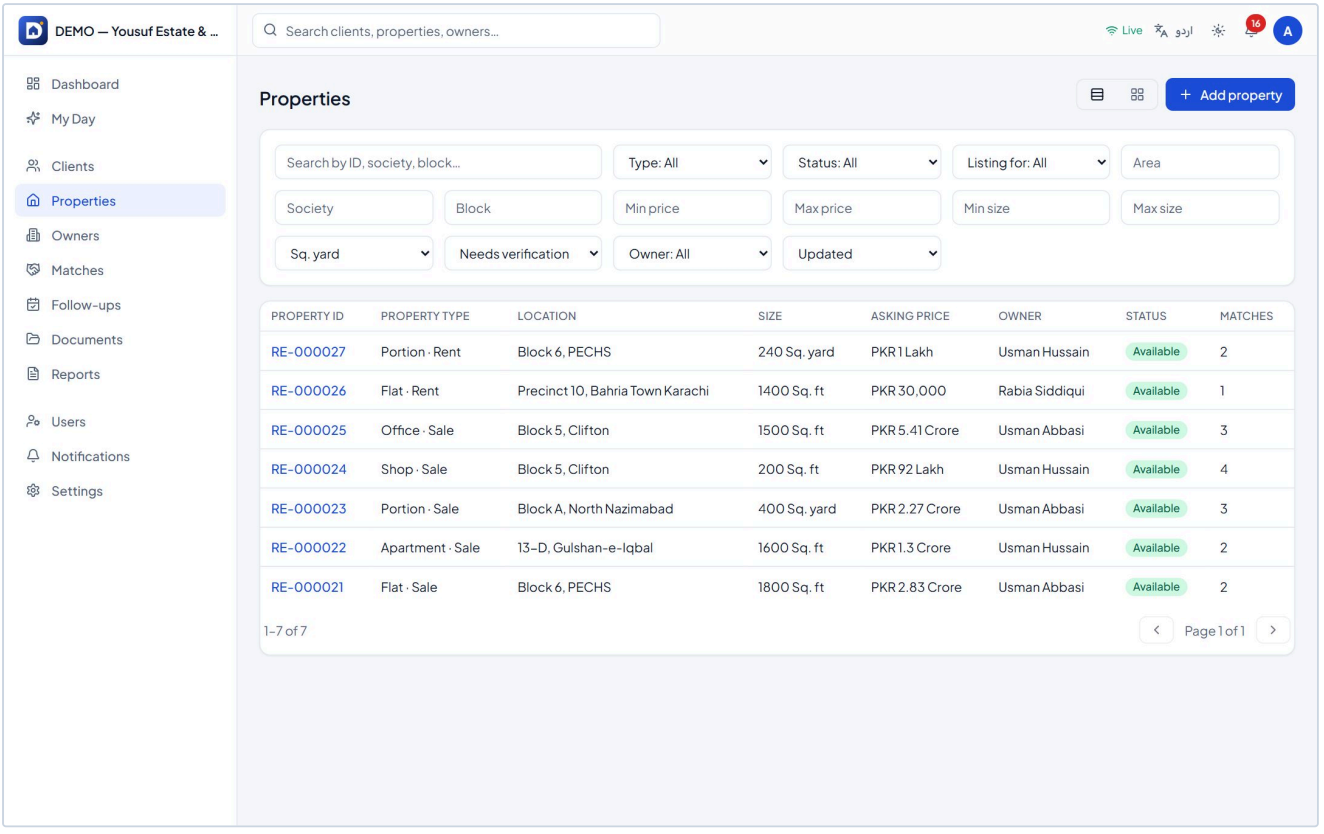

Figure 27: Listings that need verification (Verification filter)

5.6 Photos and documents

On the **Photos & videos** tab click **Upload photos or videos** to add JPEG, PNG or WebP photos or MP4/MOV/WebM videos; large photos are compressed automatically and the first photo becomes the cover. On the **Documents** tab choose a category (Registration, Ownership, Agreement, Identity, Property document, Other) and upload PDF, image, Word or Excel files.

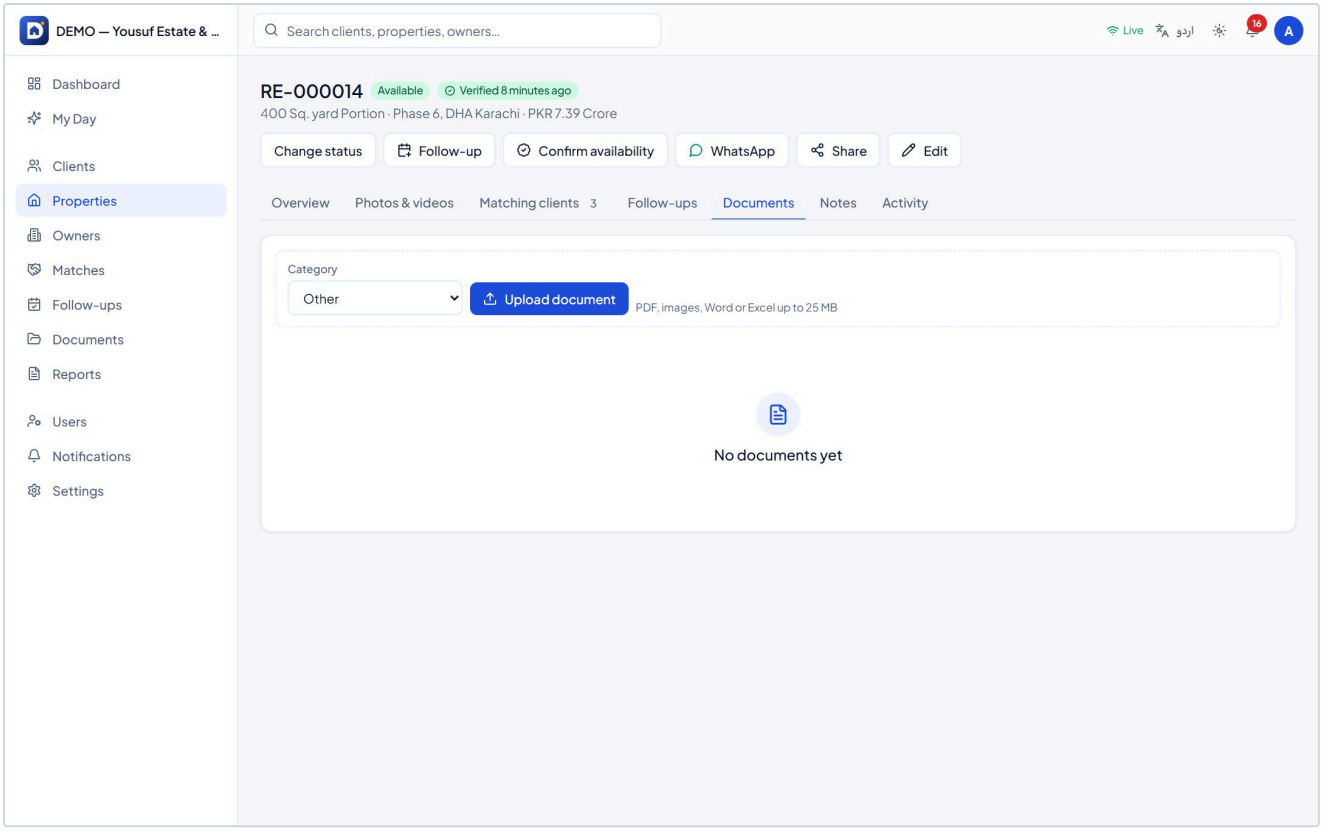

Figure 28: Documents attached to a property

> **Important.** Documents are private: they open through a short-lived secure link, so a link copied today will not work tomorrow. Only upload identity documents (CNIC copies) when you really need them.

CHAPTER 6

Property owners

6.1 Owners

Owners lists everyone whose property you sell or rent out, with their number of properties. Open an owner to see their properties, documents, notes and history.

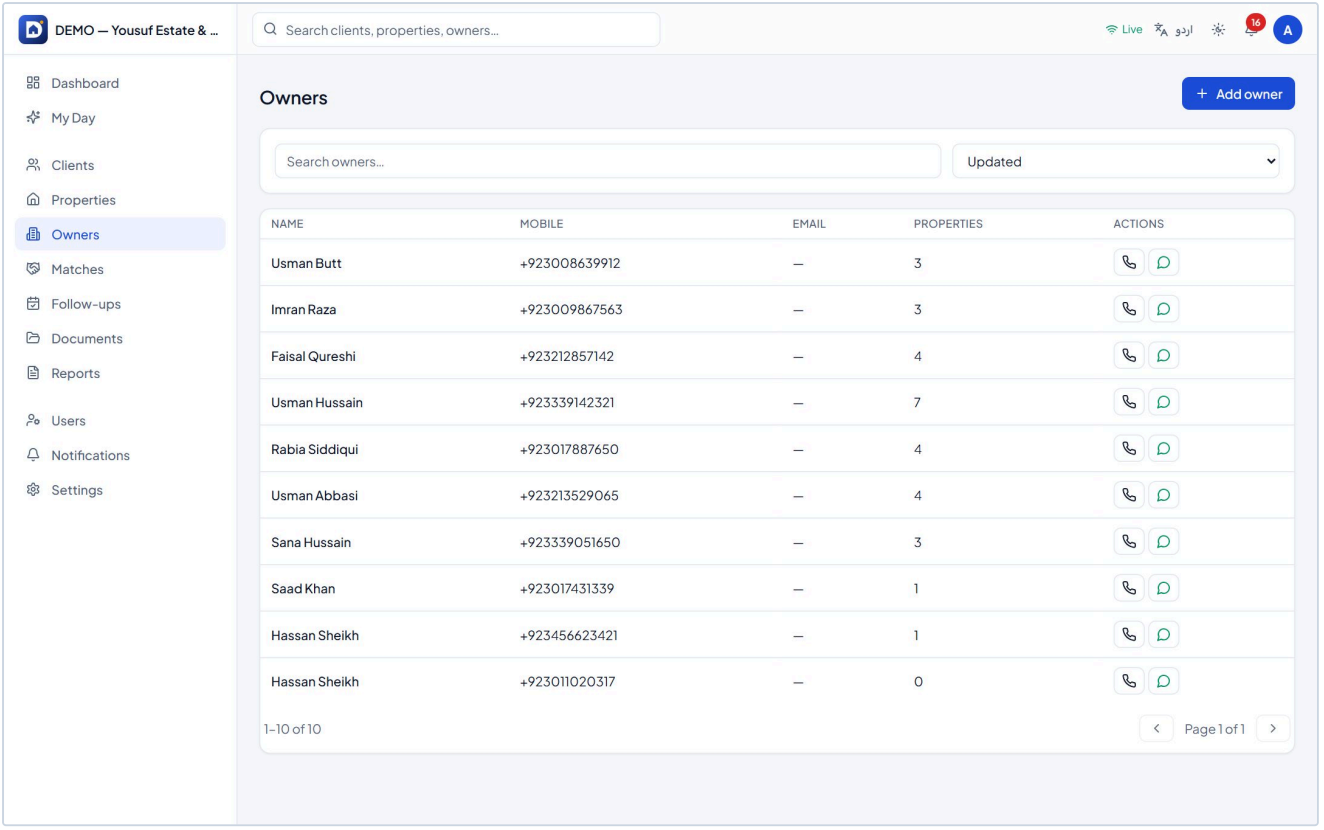

Figure 29: The owners list

To add an owner click **Add owner** and enter the full name and mobile number (required) plus WhatsApp, alternate number, e-mail, address and notes if known. Link properties to the owner from the property form.

CHAPTER 7

Smart matching

7.1 How matches are calculated

Whenever a client or property is added or changed, the system compares every client requirement with every available property and gives a score out of 100:

Criterion	Weight	Counts as a match when…
Property type	25	the type is one the client wants (similar types get partial credit)
Area / society	25	the society or area is one the client prefers
Budget	25	the price is within the budget (slightly over still gets some credit)
Size	15	the size is within the client's range (converted between units)
Purpose	10	sale for buyers, rent for tenants — a mismatch never matches

Score	Label
90–100	Excellent
80–89	Very good
70–79	Good
60–69	Possible

Only scores of 60 and above are kept as matches; team members are notified for 80 and above. The owner can change these weights and thresholds in Settings. Each match lists its reasons with ticks, such as ✓ Budget ✓ Area / society.

7.2 The Matches page

Open **Matches**. Switch between **Client → Properties** and **Property → Clients**, filter by minimum score and status.

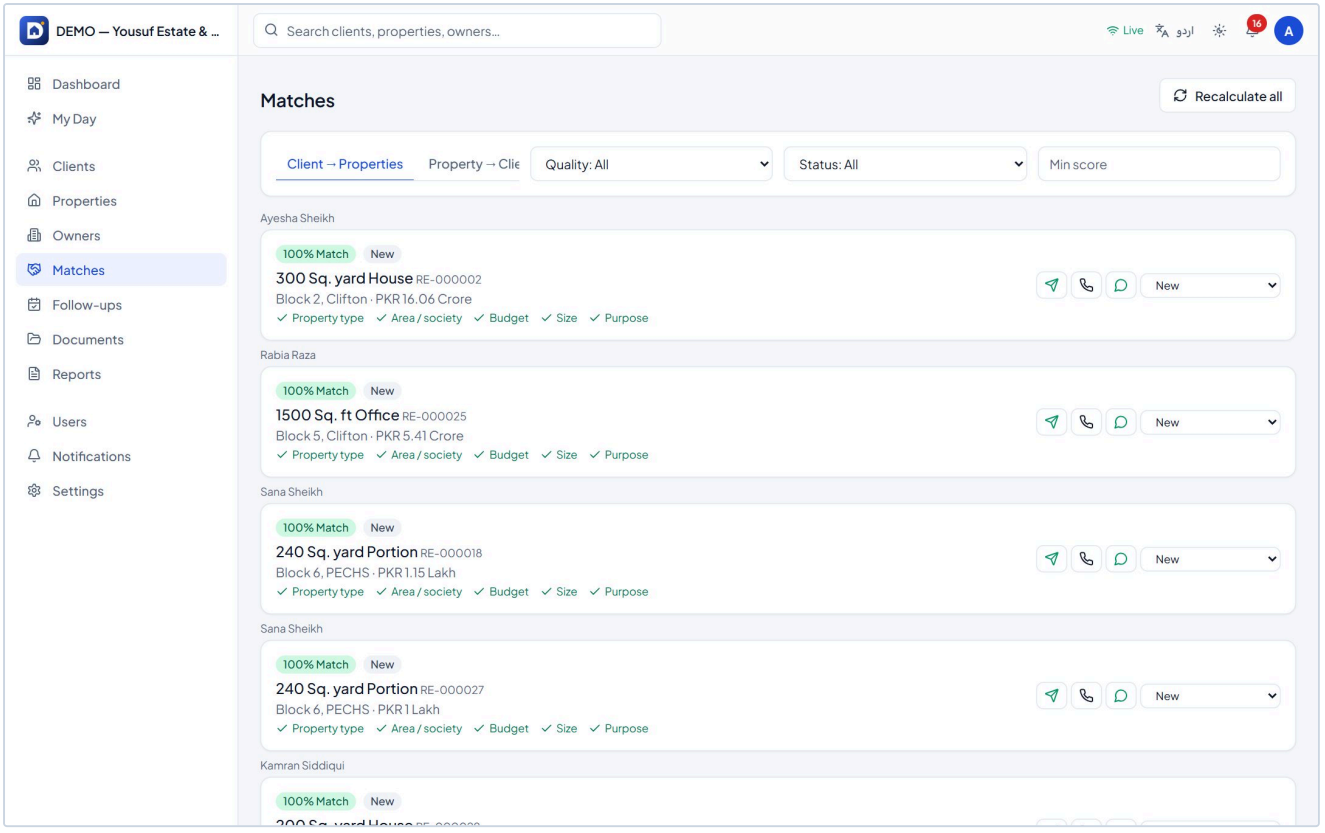

Figure 30: The Matches page

On each match: the green paper-plane button **Send property on WhatsApp** opens WhatsApp for that client with a ready message containing the property ID, type, location and price — you check it and press Send. The call and WhatsApp buttons contact the client directly. Each contact is recorded on the client's timeline.

Use **Mark as** to record progress: Viewed, Shortlisted, Contacted or Rejected.

> **Note.** Matches are never invented: if no property fits a client, the list is simply empty. When a property is sold or withdrawn its matches are hidden as "No longer available".

CHAPTER 8

Follow-ups and reminders

8.1 Follow-up list

Open **Follow-ups**. Tabs show Today, Upcoming, Overdue and Done; filter by assigned person and type (call, meeting, WhatsApp, SMS, property visit, general).

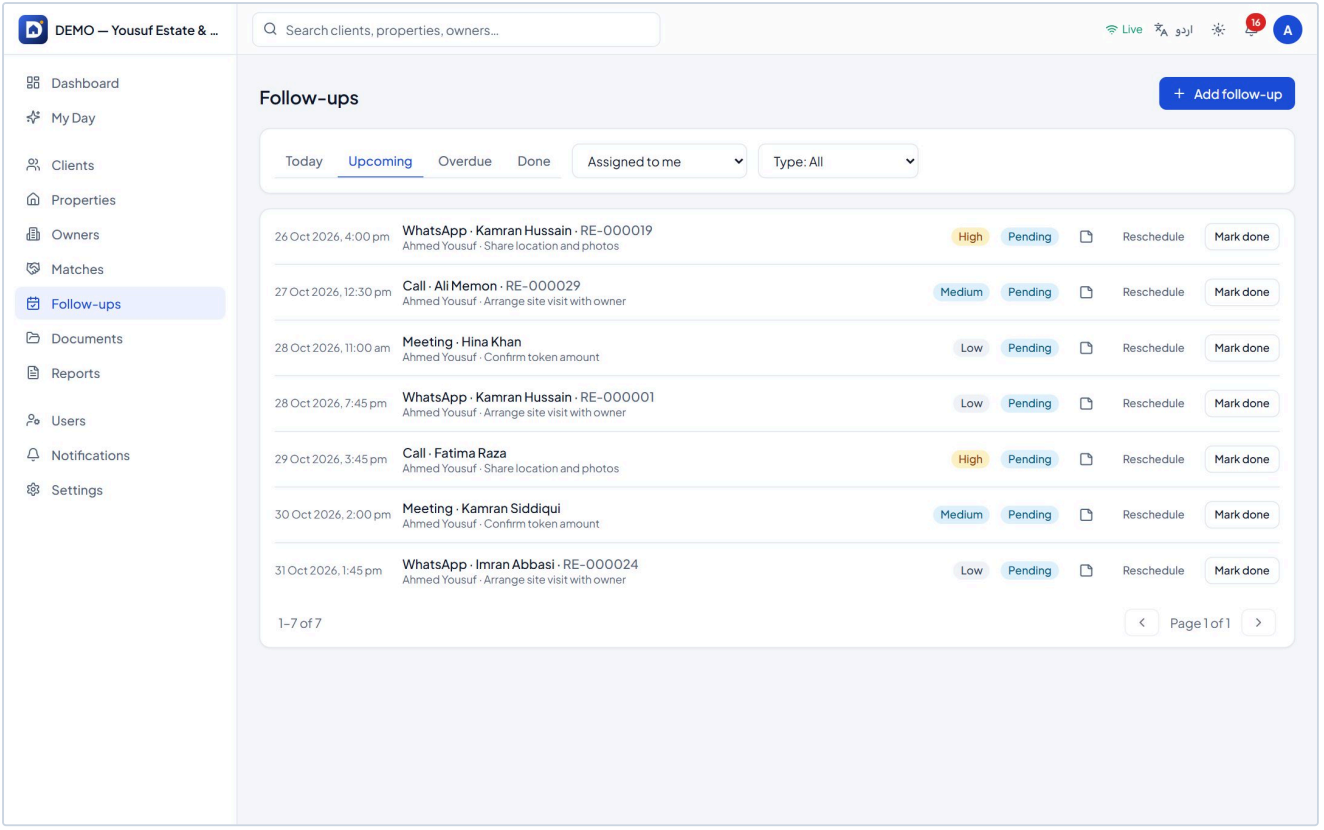

Figure 31: The follow-up list

8.2 Scheduling a follow-up or visit

Purpose	Make sure every promised call, meeting or visit happens.
Where to find it	A client or property page → **Follow-up**, or **Follow-ups** → **Add follow-up**.

Step by step

1. Choose the client (pre-filled when you start from their page) and, if relevant, the property.
2. Choose the type and the date and time.
3. Set the priority, when to be reminded and who should do it.
4. Add a note and click **Save**.

Fields

Field	Required?	What to enter
Client	**Required**	Search by name or number
Type	**Required**	Call, meeting, WhatsApp, SMS, property visit, general
Date & time	**Required**	When it should happen
Property	Optional	For visits and property-specific calls
Priority	Optional	Low, medium, high
Remind me	Optional	Minutes before (default 30)
Assigned to	Optional	Defaults to you; the assignee is notified
Notes	Optional	What to discuss or bring

What happens after saving	It appears in Follow-ups, on My Day for the assignee, on the client's Follow-ups tab and timeline. A reminder notification is sent at the reminder time.

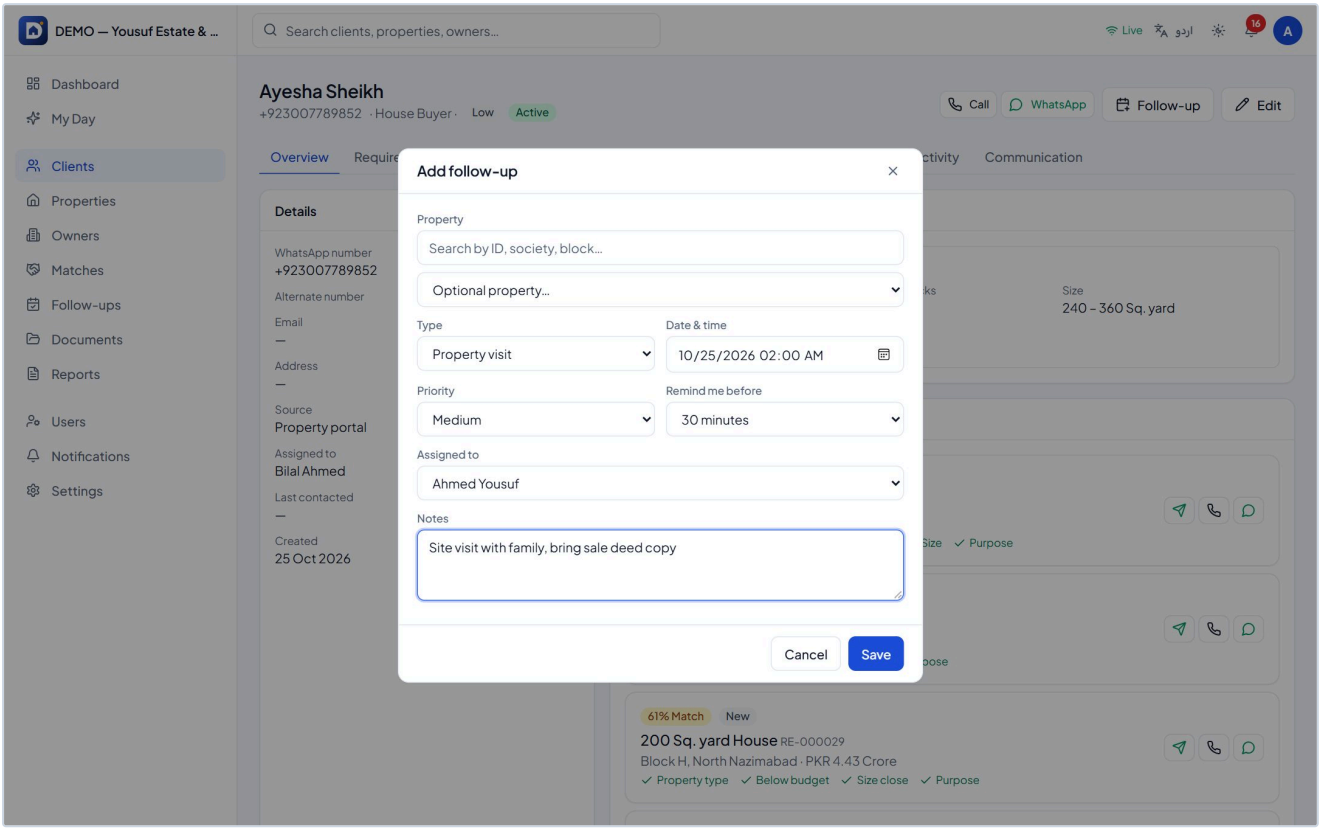

Figure 32: Scheduling a property visit

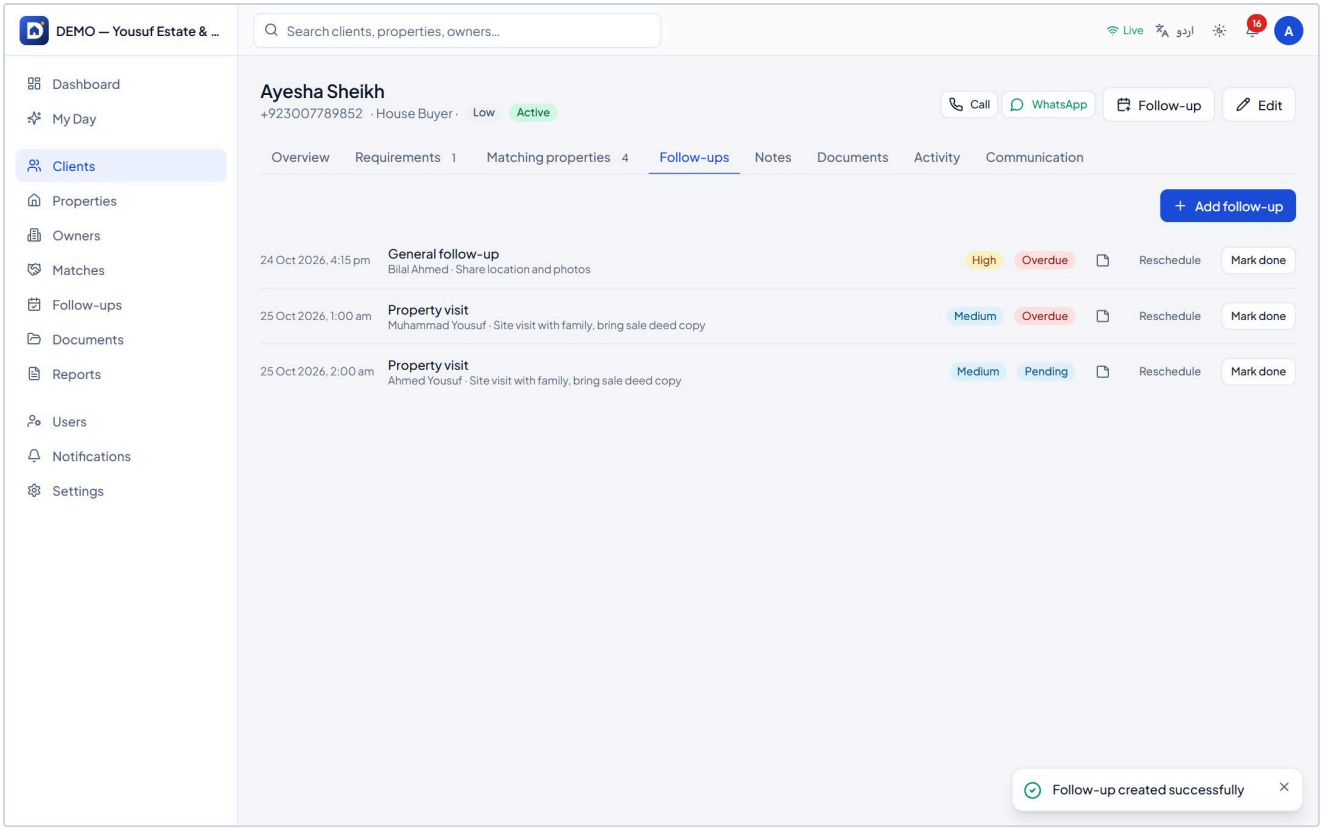

Figure 33: The new follow-up on the client's Follow-ups tab

8.3 Rescheduling

If the client asks for another time, click **Reschedule**, pick the new date and time and save. An overdue follow-up becomes pending again, the reminder moves with it, and the change is recorded on the timeline. On the mobile app this works offline.

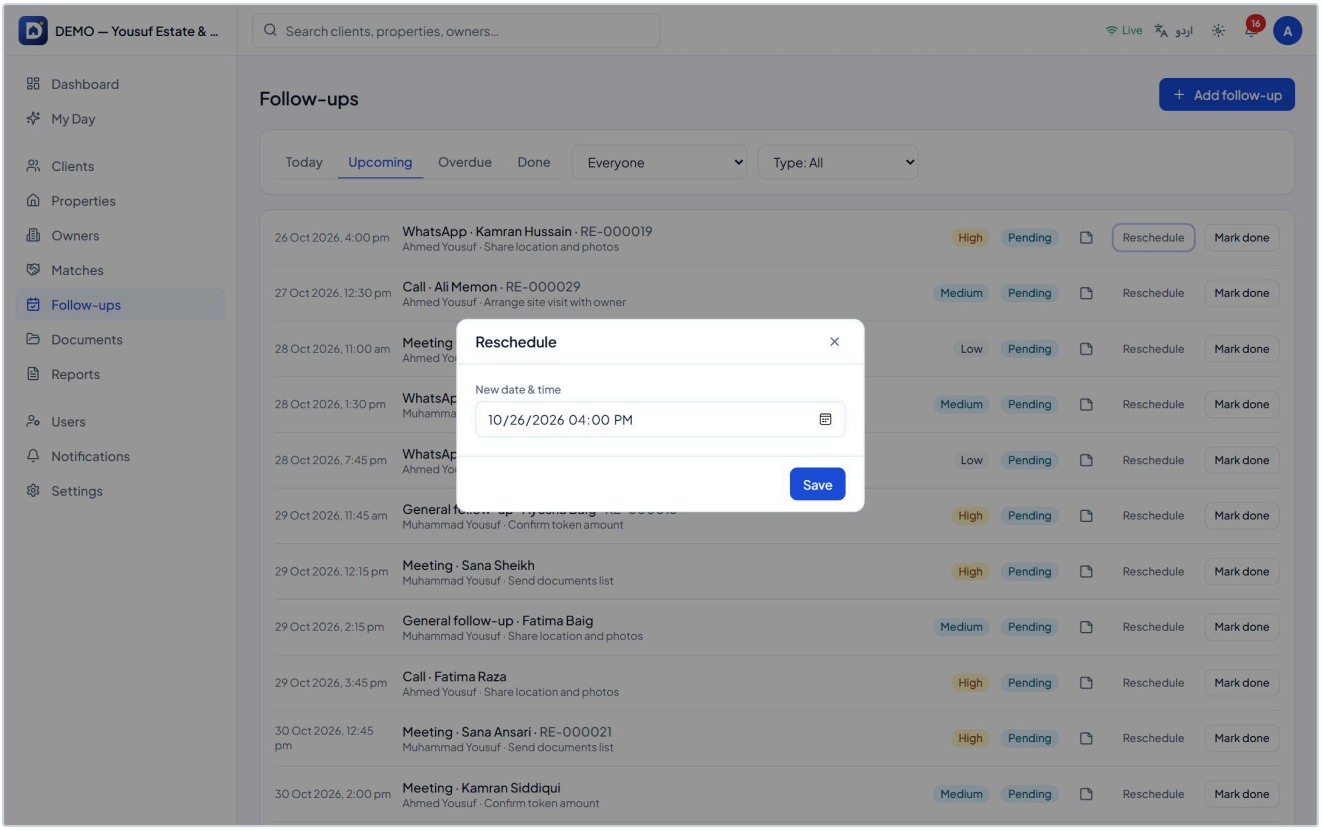

Figure 34: Rescheduling a follow-up

8.4 Completing

After the call or visit, click **Mark done**, write the outcome (for example “Liked it, second visit with family”) and save. Completed items move to the Done tab and count in team performance.

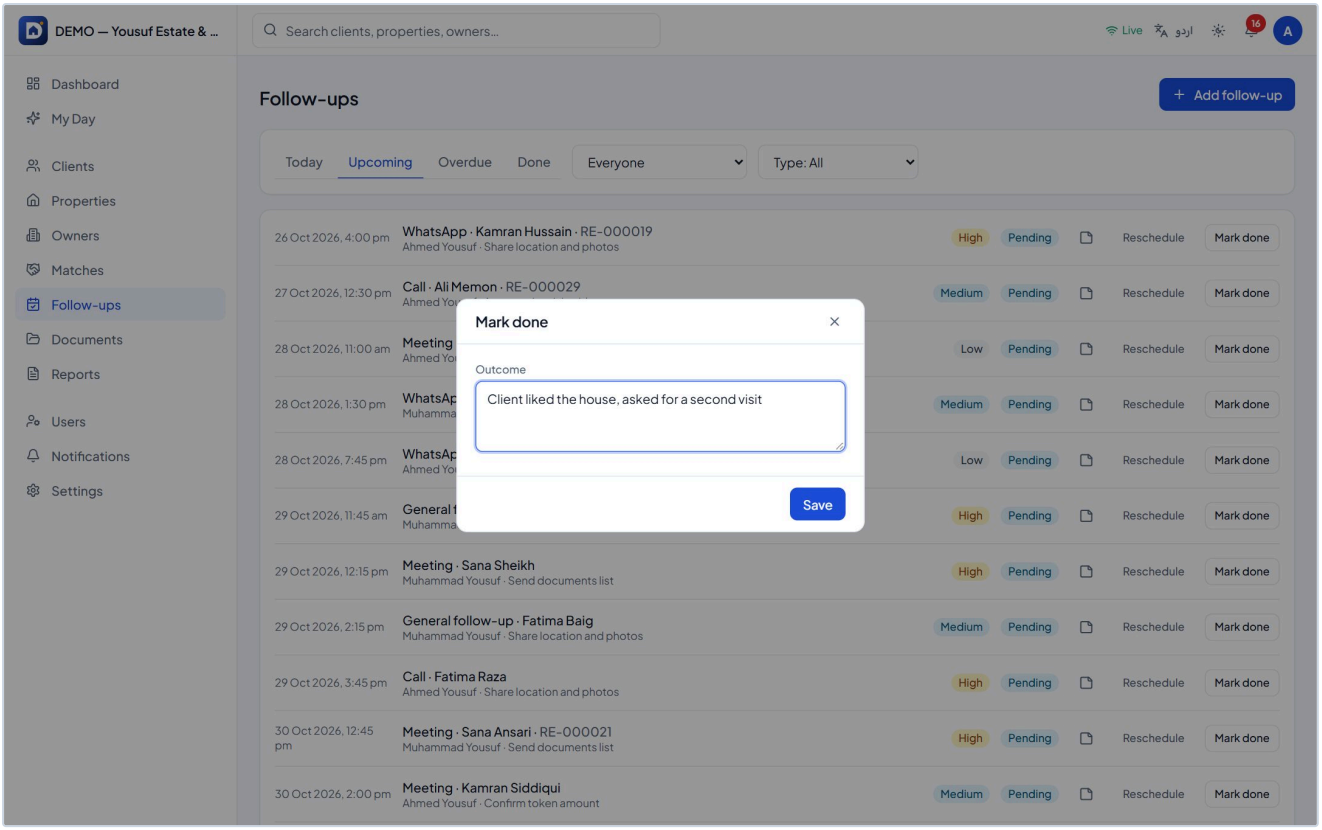

Figure 35: Completing a follow-up with its outcome

8.5 Follow-up notes

Click the note icon on a follow-up to open its notes and add details during or after the conversation.

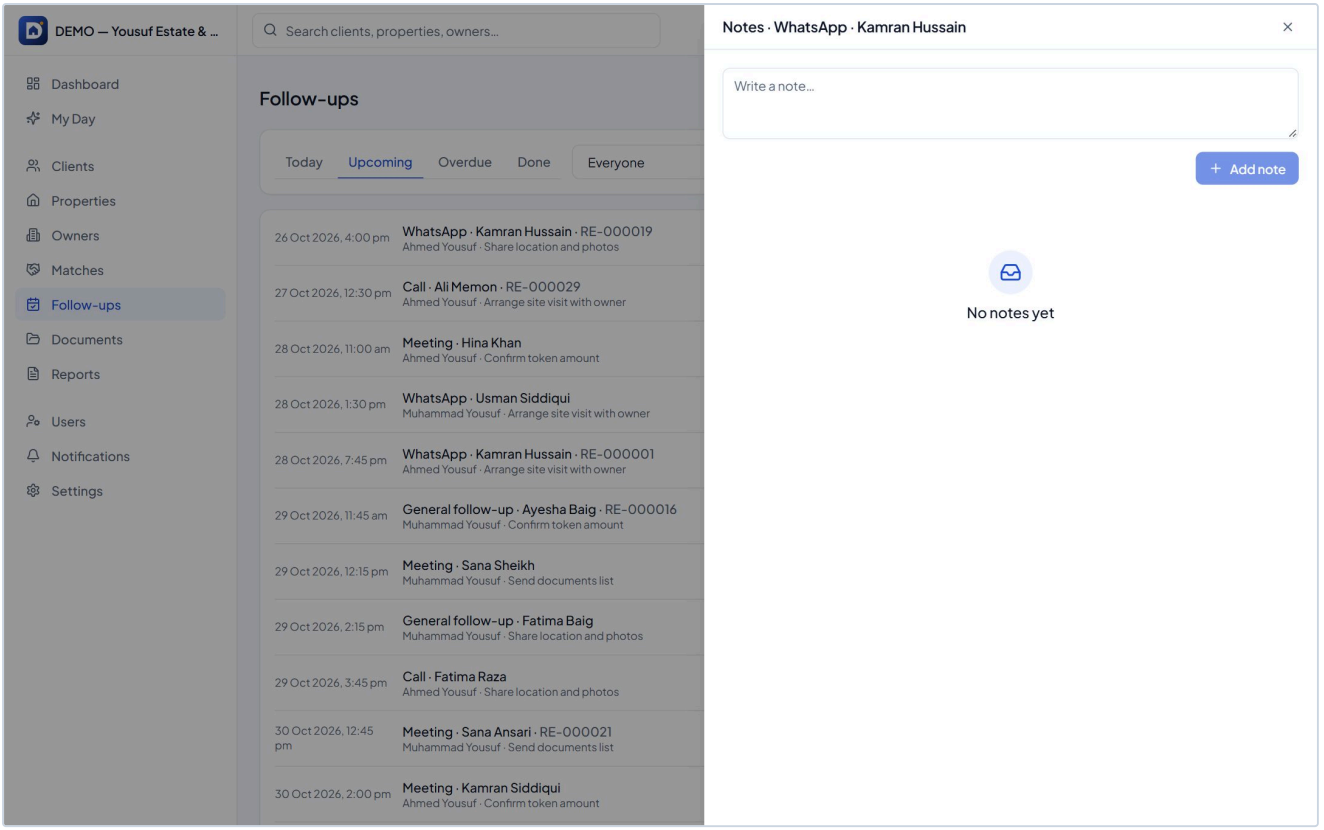

Figure 36: Notes on a follow-up

CHAPTER 9

Notifications and communication

9.1 Notification centre

The bell at the top right shows unread notifications. **Notifications** lists them by tab (All, Follow-ups, Matches, Properties, System). Click one to open the related record; use **Mark all as read** to clear them.

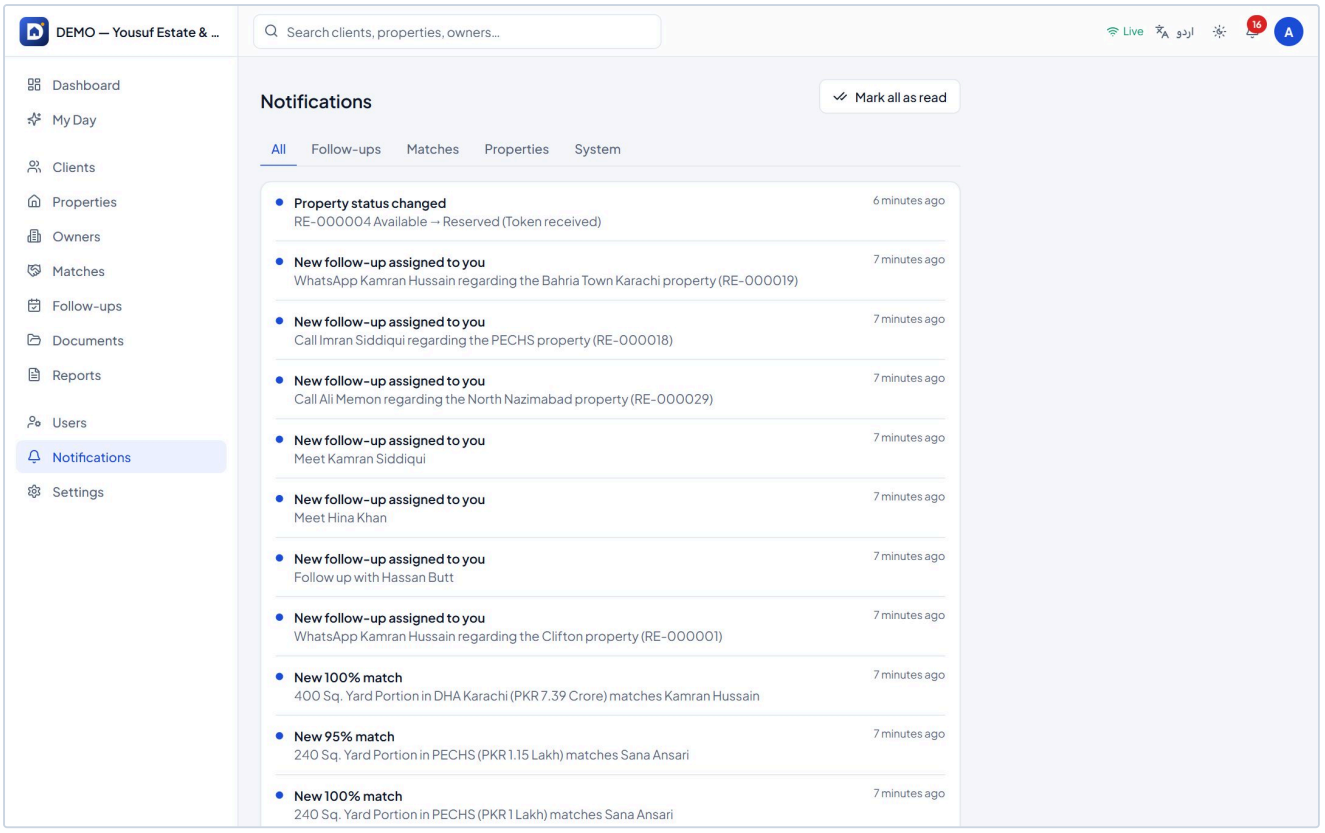

Figure 37: The notification centre

You are notified about follow-ups assigned to you, follow-up reminders, strong new matches and important property changes made by colleagues.

9.2 Calling, WhatsApp, SMS and e-mail

On client and match cards, the phone button starts a call (on a phone or a computer with a calling app), the WhatsApp button opens a chat with the client, and on the client page SMS and e-mail buttons open your messaging apps. These are one-tap shortcuts: the message is sent from your own phone or WhatsApp, and Dalliqo records that you made contact.

> **Note.** The CRM does not send WhatsApp messages by itself — you always press Send in WhatsApp. Automatic WhatsApp messaging would need a WhatsApp Business API account, which is not part of this version.

9.3 Live updates and push notifications

The green “Live” label at the top means you are connected: when a colleague adds or changes a client, property or follow-up, your screen updates by itself.

> **Note.** Push notifications to a closed mobile app require the business’s Firebase account to be configured by your system provider. If it is not configured, notifications still appear inside the app and on the web.

CHAPTER 10

Documents and data export

10.1 Documents library

Documents lists every document in the business; filter by record type (client, property, owner) and category. Click **Preview** to open a document in a new tab, from where you can download it.

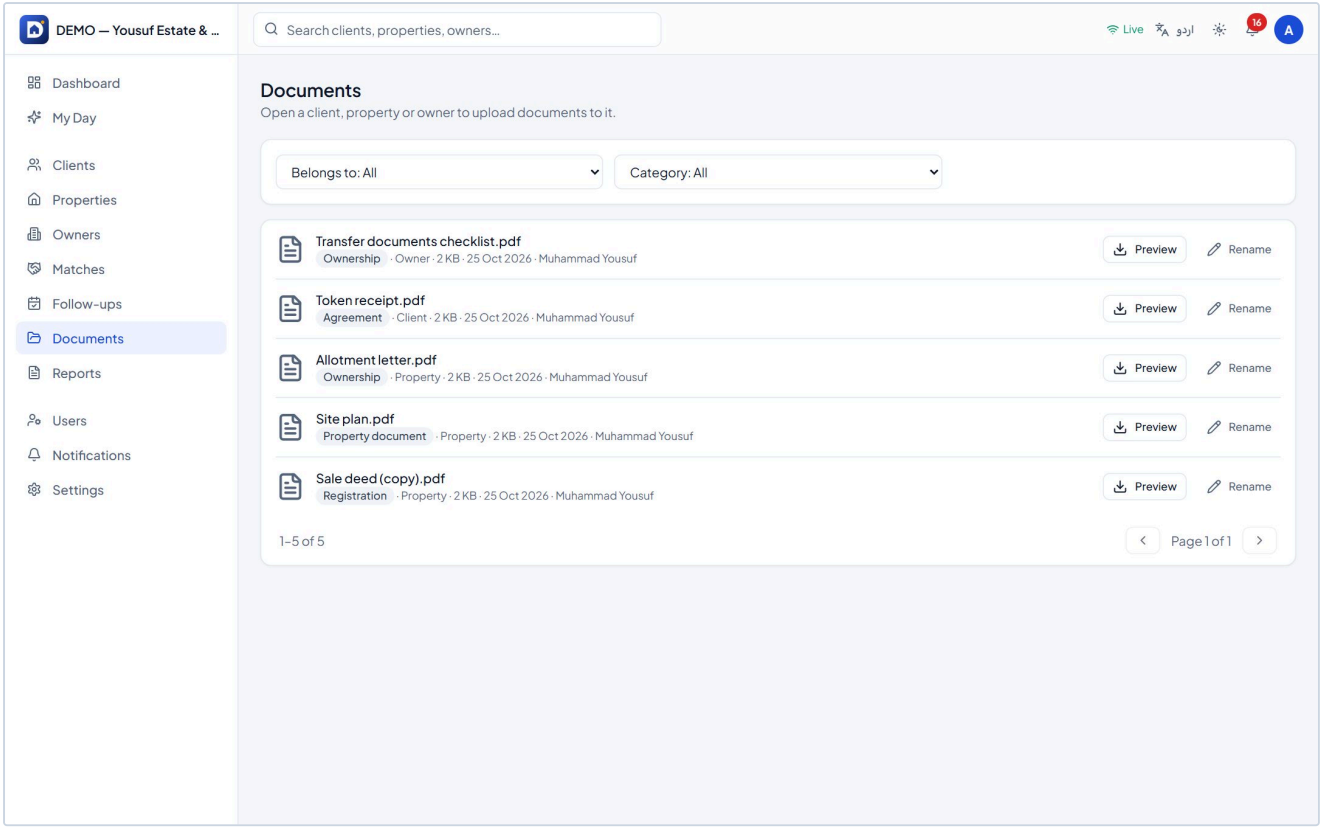

Figure 38: The documents library

To upload, open the client, property or owner and use their **Documents** tab. You can rename a document with the pencil button and share a secure link with **Share**.

> **Important.** Treat documents as confidential. Share links only with the client concerned; they expire automatically.

10.2 Reports and exports

Purpose	Download business data for accounts, management or a partner.
Where to find it	**Reports** in the left menu.

Step by step

1. Choose the data: clients, properties, owners, follow-ups or matches.

2. Choose Excel (.xlsx) or PDF report.
3. Optionally set filters (for example type, status, society, price range).
4. Click **Download**.

What happens after saving	The file downloads to your computer. Exports are limited to 10,000 rows — use filters for larger data.
Permissions and limits	Urdu text appears correctly in Excel files; in PDF reports Urdu characters are not yet rendered, so use Excel for Urdu data.

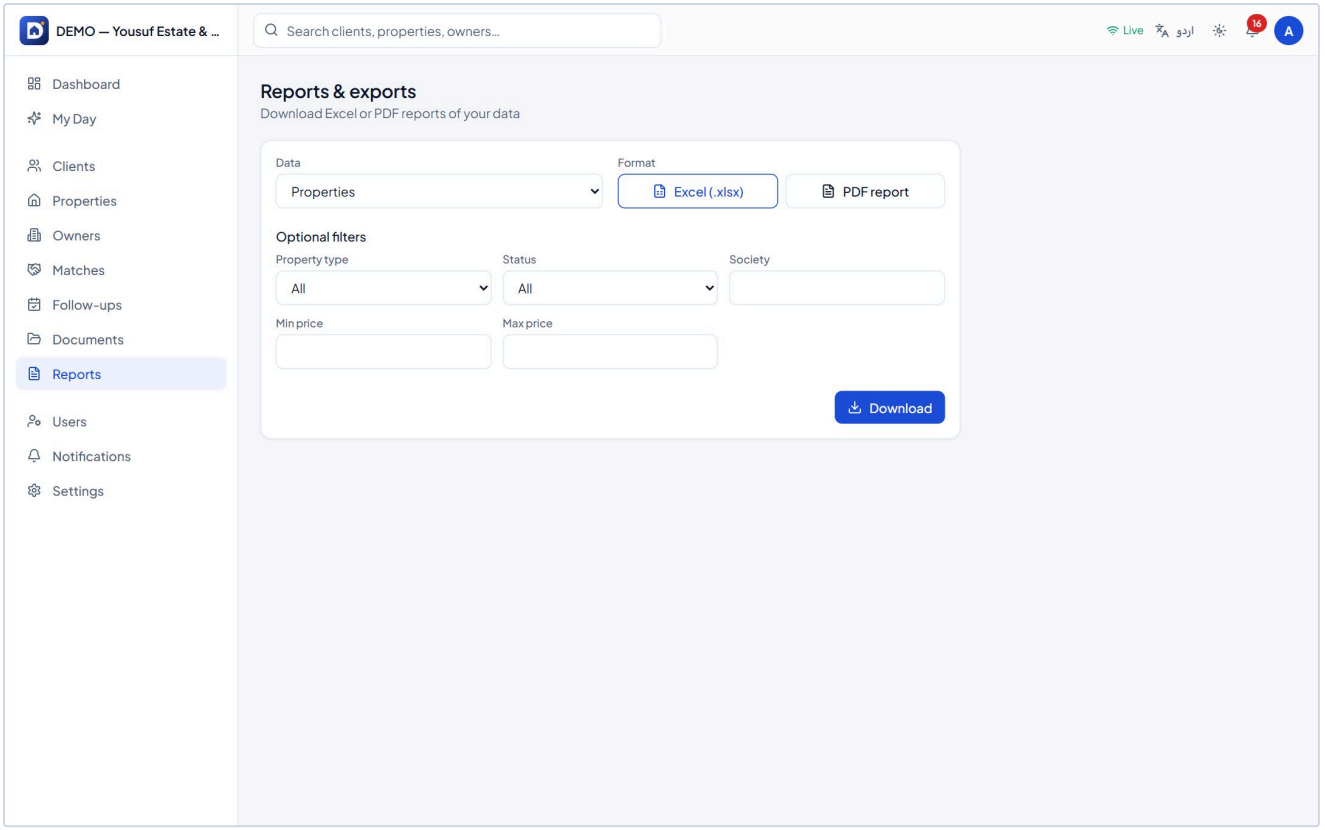

Figure 39: Reports and exports

Important. Exported files contain client phone numbers and prices. Store them securely and delete copies you no longer need.

CHAPTER 11

The mobile app

11.1 Using Dalliqo on your phone

The Android/iOS app has the same clients, properties, owners, matches, follow-ups, notes and documents, with the same permissions. It is designed for field work:

- **Works offline.** Add or edit clients, properties, owners, follow-ups and notes without internet. Changes wait in a queue and send automatically when you are back online. The sync chip shows “All data synced” or how many changes are waiting.
- **Conflicts.** If a colleague changed the same price or status while you were offline, the app shows both versions and lets you choose “Keep mine” or “Keep latest”.
- **PIN and fingerprint/face lock.** Set a 4–digit PIN (and biometrics, if your phone supports it) in Settings → Security so nobody can open the app on your unlocked phone.
- **Backup and new phone.** Everything is stored in the business’s cloud account. On a new phone, install the app and sign in — your business data is restored automatically. Settings → Backup & restore shows whether all changes are uploaded.
- **One-tap + button.** Add a client, property, follow-up, note or document in one or two taps.

> **Note.** This manual’s screenshots are from the web application. The mobile app had not yet been installed on a test phone when this manual was prepared, so mobile screenshots are not included; screens follow the same layout and wording.

CHAPTER 12

Language, Urdu and appearance

12.1 English and Urdu

Click the language button (اردو / English) at the top of any page. In Urdu the whole layout switches to right-to-left: the menu moves to the right and text aligns right. Phone numbers and property IDs stay left-to-right so they remain readable. Your choice is saved on your account and used on the mobile app too.

The sun/moon button switches between light and dark theme; the layout also adapts to tablets.

CHAPTER 13

End-to-end workflows

13.1 From inquiry to visit

1. A buyer calls or messages on WhatsApp. Search their number — if they exist, open them; otherwise click Add client.
2. Enter name, mobile, source (e.g. WhatsApp) and requirements: purpose, type, society, size and budget. Save.
3. Open the Matching properties tab and pick the best matches (look at the score and the ✓ reasons).
4. Press Send property on WhatsApp on a match, check the message, and press Send in WhatsApp.
5. Click Follow-up, choose Property visit with the property, date and time; save.
6. After the visit, Mark done with the outcome, add a note, and update the client's status or requirements.
7. Review the Activity tab — every step above is recorded.

13.2 Listing a new property

1. Add or find the owner.
2. Add property with type, location, size, asking price and owner; save.
3. Upload photos (first photo becomes the cover) and documents.
4. Open Matching clients and contact the best matches.
5. Change the status when a token is received (Reserved) and when the deal closes (Sold/Rented).

13.3 Weekly listing check

1. Open the dashboard card "Listings to re-verify" (or Properties → Verification: Needs verification).
2. Call each owner; click Confirm availability with a note, update the price, or change the status.
3. The list empties as you go, and buyers only see current stock.

13.4 Monthly review

1. Set the dashboard range to 30 days.
2. Check Lead sources & conversion: which sources bring clients who close?
3. Note follow-up performance and new records.
4. Download Excel reports of properties (sold/rented) and clients for the accounts.

CHAPTER 14

Troubleshooting

14.1 Common problems

Problem	What to do
Unable to sign in	Check the e-mail spelling and Caps Lock. After several wrong attempts the account is locked for a short time — wait 15 minutes. If your account was suspended you will see a message; contact the owner.
Forgot password	Use “Forgot password?” on the sign-in page, or ask the owner to set a temporary password.
“Can’t reach the server”	Your internet connection or the server is down. Check your connection and try again in a minute. On the mobile app keep working offline — changes will sync later.
I can’t see a client or property	Clear the filters and search box; check the status filter (sold/inactive). Deleted records are no longer shown. If a colleague just added it, wait a moment or refresh.
No matching properties appear	Matches need a requirement with purpose, and properties that are Available. Check the budget is in full rupees, the society spelling matches the property, and the size unit is right. Scores below 60 are not shown.
A photo or document fails to upload	Only JPEG/PNG/WebP photos, MP4/MOV/WebM videos, and PDF/Word/Excel/image documents are accepted, within the size limits. Renamed files (e.g. an .exe renamed to .jpg) are rejected. Try a smaller file or a better connection.
A follow-up doesn’t appear	The list shows “Assigned to me” by default — switch to Everyone. Check the right tab (Today / Upcoming / Overdue / Done).
Notifications are not received	In-app notifications appear under the bell. Push notifications on a closed phone app only work if Firebase has been configured for your business; allow notifications for the app in your phone settings.
Sync is pending or failed (mobile)	Open Settings → Sync. Pending changes send automatically when online. A failed change shows the reason (for example an invalid phone number) — fix and retry, or discard it.
A button is missing / “You do not have permission”	Your access level does not include that action. Ask the business owner if you need it.
Export fails	Narrow the filters if you have more than 10,000 rows. Use Excel for Urdu text.

CHAPTER 15

Best practices

15.1 Working habits that keep the data useful

- Search by mobile number before adding a client; update the existing record instead of creating a new one.
- Write phone numbers in full (0300 1234567) and amounts in full rupees (15000000), never “1.5 crore” in a number field.
- Use the same spelling for societies and blocks every time (pick one: “DHA Karachi”, “Block 13-D”).
- Always record the client’s source — it powers the lead-source report.
- Never end a conversation without a next step: schedule a follow-up before you hang up.
- Keep the Overdue tab empty: complete, reschedule or cancel — don’t ignore.
- Confirm listing availability with owners at least every 30 days.
- Write a short note after every important call or visit — the next colleague will thank you.
- Do not store CNIC numbers or other identity details in notes; upload identity documents only when necessary.
- Lock your computer and phone when you step away; never share your login.
- Delete exported files you no longer need, and never send them to anyone outside the business.

CHAPTER 16

Frequently asked questions

16.1 FAQ

Is my data shared with other businesses?

No. Each business's data is completely separate; another business cannot see or even detect your records.

Can I use Dalliqo on my phone?

Yes — the mobile app works with the same account and also works offline.

What happens if I lose my phone?

Your data is stored in the cloud. Ask the owner to sign you out of the lost device (or do it in Settings → Security), then sign in on the new phone.

Why does a property say "Needs verification"?

It is available but nobody has confirmed with the owner in the last 30 days. Someone with edit access should call the owner and click Confirm availability.

Does Dalliqo send WhatsApp messages automatically?

No. It prepares the message and opens WhatsApp; you press Send.

Why can't I delete a record?

Deleting is limited to the owner and managers so that records are not lost by mistake.

Can I see who changed a price?

The property's Activity tab shows price and status changes; the full audit log is available to the owner and managers.

Is the app available in Urdu?

Yes, on web and mobile, with right-to-left layout. PDF reports do not yet render Urdu text; use Excel.

CHAPTER 17

Support and escalation

17.1 Getting help

For questions about how your business uses Dalliqo, ask your business owner or office manager first.

Support item	Details
Support contact name	[to be provided by your system provider]
Support e-mail	[to be provided]
Support phone / WhatsApp	[to be provided]
Support hours	[to be provided]
Service level (response times)	[as agreed in your service contract]

When reporting a problem, include: your name and e-mail, what you were doing, the time it happened, the record (e.g. client name or property ID) and a screenshot if possible. Never send your password.

APPENDIX

Revision history

Version	Revision	Date	Changes
1.0	Rev. A	—	First issue for the MVP release, with screenshots of the current application.
1.0	Rev. B	25 October 2026	Rebranded as Dalliqo: new logo, colours and typeface; all screenshots recaptured from the rebranded application. No change to features or procedures.
